Algebraic Geometry Lecture Notes In Mathematics Volume 1417:

The Art of Doing Algebraic Geometry Thomas Dedieu, Flaminio Flamini, Claudio Fontanari, Concettina Galati, Rita Pardini, 2023-04-14 This volume is dedicated to Ciro Ciliberto on the occasion of his 70th birthday and contains refereed papers offering an overview of important parts of current research in algebraic geometry and related research in the history of mathematics It presents original research as well as surveys both providing a valuable overview of the current state of the art of the covered topics and reflecting the versatility of the scientific interests of Ciro Ciliberto [Algebraic Cycles and Hodge Theory](#) Mark L. Green, Jacob P. Murre, Claire Voisin, 2004-09-02 The main goal of the CIME Summer School on Algebraic Cycles and Hodge Theory has been to gather the most active mathematicians in this area to make the point on the present state of the art Thus the papers included in the proceedings are surveys and notes on the most important topics of this area of research They include infinitesimal methods in Hodge theory algebraic cycles and algebraic aspects of cohomology and k theory transcendental methods in the study of algebraic cycles *Transcendental Methods in Algebraic Geometry* Jean-Pierre Demailly, Thomas Peternell, Gang Tian, Andrej N. Tyurin, 2006-11-14 **Interactions of Classical and Numerical Algebraic Geometry** Daniel James Bates, 2009-09-16 This volume contains the proceedings of the conference on Interactions of Classical and Numerical Algebraic Geometry held May 22-24 2008 at the University of Notre Dame in honor of the achievements of Professor Andrew J Sommese While classical algebraic geometry has been studied for hundreds of years numerical algebraic geometry has only recently been developed Due in large part to the work of Andrew Sommese and his collaborators the intersection of these two fields is now ripe for rapid advancement The primary goal of both the conference and this volume is to foster the interaction between researchers interested in classical algebraic geometry and those interested in numerical methods The topics in this book include but are not limited to various new results in complex algebraic geometry a primer on Seshadri constants analyses and presentations of existing and novel numerical homotopy methods for solving polynomial systems a numerical method for computing the dimensions of the cohomology of twists of ideal sheaves and the application of algebraic methods in kinematics and phylogenetics *The Canonical Ring of a Stacky Curve* John Voight, David Zureick-Brown, 2022-05-24 View the abstract **Complex Analysis and Geometry** Vincenzo Ancona, Alessandro Silva, 2013-11-11 The papers in this wide ranging collection report on the results of investigations from a number of linked disciplines including complex algebraic geometry complex analytic geometry of manifolds and spaces and complex differential geometry **ADVANCED ALGEBRA** Dr. Antony P. V., 2021-05-04 *Moduli of K-stable Varieties* Giulio Codogni, Ruadhaí Dervan, Filippo Viviani, 2019-06-27 This volume is an outcome of the workshop Moduli of K stable Varieties which was held in Rome Italy in 2017 The content focuses on the existence problem for canonical Kähler metrics and links to the algebro geometric notion of K stability The book includes both surveys on this problem notably in the case of Fano varieties and original contributions addressing this and related problems The papers in the latter group develop the

theory of K stability explore canonical metrics in the Kähler and almost Kähler settings offer new insights into the geometric significance of K stability and develop tropical aspects of the moduli space of curves the singularity theory necessary for higher dimensional moduli theory and the existence of minimal models Reflecting the advances made in the area in recent years the survey articles provide an essential overview of many of the most important findings The book is intended for all advanced graduate students and researchers who want to learn about recent developments in the theory of moduli space K stability and Kähler Einstein metrics Projective Geometry and Formal Geometry Lucian Badescu, 2012-12-06 The aim of this monograph is to introduce the reader to modern methods of projective geometry involving certain techniques of formal geometry Some of these methods are illustrated in the first part through the proofs of a number of results of a rather classical flavor involving in a crucial way the first infinitesimal neighbourhood of a given subvariety in an ambient variety Motivated by the first part in the second formal functions on the formal completion X_Y of X along a closed subvariety Y are studied particularly the extension problem of formal functions to rational functions The formal scheme X_Y introduced to algebraic geometry by Zariski and Grothendieck in the 1950s is an analogue of the concept of a tubular neighbourhood of a submanifold of a complex manifold It is very well suited to study the given embedding $Y \subset X$ The deep relationship of formal geometry with the most important connectivity theorems in algebraic geometry or with complex geometry is also studied Some of the formal methods are illustrated and applied to homogeneous spaces The book contains a lot of results obtained over the last thirty years many of which never appeared in a monograph or textbook It addresses to algebraic geometers as well as to those interested in using methods of algebraic geometry Algebraic Geometry Paolo Francia, 2002 The papers in this volume cover a wide spectrum of algebraic geometry from motives theory to numerical algebraic geometry and are mainly focused on higher dimensional varieties and Minimal Model Program and surfaces of general type
