Proceedings of the International Conference on Algebra 2010

Wanida Hemakul, Sri Wahyuni, Polly Wee Sy, 2012 This volume is an outcome of the International Conference on Algebra in celebration of the 70th birthday of Professor Shum Kar Ping which was held in Gadjah Mada University on 7-10 October 2010 As a consequence of the wide coverage of his research interest and work it presents 54 research papers all original and referred describing the latest research and development and addressing a variety of issues and methods in semigroups groups rings and modules lattices and Hopf Algebra The book also provides five well written expository survey articles which feature the structure of finite groups by A Ballester Bolinches R Esteban Romero and Yangming Li new results of Gr bner Shirshov basis by L A Bokut Yuqun Chen and K P Shum polygroups and their properties by B Davvaz main results on abstract characterizations of algebras of n place functions obtained in the last 40 years by Wieslaw A Dudek and Valentin S Trokhimenko Inverse semigroups and their generalizations by X M Ren and K P Shum Recent work on cones of metrics and combinatorics done by M M Deza et al is included

Universal Algebra and Applications in Theoretical Computer Science

Klaus Denecke, Shelly L. Wismath, 2018-10-03 Over the past 20 years the emergence of clone theory hyperequational theory commutator theory and tame congruence theory has led to a growth of universal algebra both in richness and in applications especially in computer science Yet most of the classic books on the subject are long out of print and to date no other book has integrated these theories with the long established work that supports them Universal Algebra and Applications in

Theoretical Computer Science introduces the basic concepts of universal algebra and surveys some of the newer developments in the field. The first half of the book provides a solid grounding in the core material. A leisurely pace, careful exposition, numerous examples and exercises combine to form an introduction to the subject ideal for beginning graduate students or researchers from other areas. The second half of the book focuses on applications in theoretical computer science and advanced topics including Malcev conditions, tame congruence theory, clones and commutators. The impact of the advances in universal algebra on computer science is just beginning to be realized and the field will undoubtedly continue to grow and mature. *Universal Algebra and Applications in Theoretical Computer Science* forms an outstanding text and offers a unique opportunity to build the foundation needed for further developments in its theory and in its computer science applications.

Algebra and Its Applications Dinh Van Huynh, Surender Kumar Jain, Sergio R. López-Permouth, 2000. Among all areas of mathematics, algebra is one of the best suited to find applications within the frame of our booming technological society. The thirty-eight articles in this volume encompass the proceedings of the International Conference on Algebra and Its Applications, Athens, OH, 1999, which explored the applications and interplay among the disciplines of ring theory, linear algebra, and coding theory. The presentations collected here reflect the dialogue between mathematicians involved in theoretical aspects of algebra and mathematicians involved in solving problems where state-of-the-art research tools may be used and applied. This Contemporary Mathematics series volume communicates the potential for collaboration among those interested in exploring the wealth of applications for abstract algebra in fields such as information and coding. The expository papers would serve well as supplemental reading in graduate seminars.

Algebra, Arithmetic and Geometry with Applications Chris Christensen, Ganesh Sundaram, Avinash Sathaye, Chandrajit Bajaj, 2011-06-27. Proceedings of the Conference on Algebra and Algebraic Geometry with Applications, July 19-26, 2000, at Purdue University, to honor Professor Shreeram S. Abhyankar on the occasion of his seventieth birthday. Eighty-five of Professor Abhyankar's students, collaborators, and colleagues were invited participants. Sixty participants presented papers related to Professor Abhyankar's broad areas of mathematical interest. Sessions were held on algebraic geometry, singularities, group theory, Galois theory, combinatorics, Drinfeld modules, affine geometry, and the Jacobian problem. This volume offers an outstanding collection of papers by expert authors.

Proceedings of the 12th ICMI Study Conference, 2001. **Proceedings Of The Third Asian Mathematical Conference 2000** Lo Yang, Toshikazu Sunada, Polly Wee Sy, 2002-04-04. This proceedings volume contains 55 research and expository articles on a wide range of currently active and interesting areas in pure and applied mathematics. The research articles report on the current research accomplishments and the significance of the results. Every expository article aims to make the subject interesting by including the state of the subject, description and motivation of the problems, the relevance of the results, and open problems for future research directions. This book serves as a good reference not only for researchers but also for graduate students.
