Big For Our Planet:

Will Big Business Destroy Our Planet? Peter Dauvergne, 2018-05-04 Walmart Coca Cola BP Toyota The world economy runs on the profits of transnational corporations Politicians need their backing Non profit organizations rely on their philanthropy People look to their brands for meaning And their power continues to rise Can these companies as so many are now hoping provide the solutions to end the mounting global environmental crisis Absolutely the CEOs of big business are telling us the commitment to corporate social responsibility will ensure it happens voluntarily Peter Dauvergne challenges this claim arguing instead that corporations are still doing far more to destroy than protect our planet Trusting big business to lead sustainability is he cautions unwise perhaps even catastrophic Planetary sustainability will require reining in the power of big business starting now

Heirs of the Big Bang William T. Beran,2023-10-10 You ve probably had some interest in tracking your family tree back several generations or more With currently developed gene editing techniques scientists are now able to trace human heritage as well as all life back to our ultimate common ancestor who lived several billion years ago This book unveils the transformative journey leading from Earth s earliest living single cell to the remarkable multicellular creature you see looking back at you in the mirror each morning Human s ultimate development that transformed us from just another ho hum animal into the planet s supreme species is also examined along with the effect this development had on other humans as well as other contemporary life forms Our range of emotions and the ensuing motivation for action are analyzed with regard to our psychological self interests We discuss how despite these strongly engrained self interests humans still regularly manage to produce what most would agree is unqualified altruistic behavior We also see how our basic

five senses provide us with a range of interest and pleasures beyond just their self survival purposes We also examine our insatiable adventuresome spirit which led to the colonization of the entire world and now spurs us to dream of migrating to other planets as well as to live in orbit in outer space The mesmerizing idea of producing robots in our own image with even superior mental faculties is also reviewed We discuss why some of these goals and ideas appear totally fanciful but also recognize that reality has often sprouted from what was once considered whimsical imagination

The Big Backyard Ron Miller, 2023-03-07 Thousands of years ago humans believed that Earth was the center of the universe that the world they lived on was all there was Truthfully the solar system extends almost halfway to the nearest star And it is composed of not only planets asteroids and comets but also powerful forces and vast fields of energy This is our solar system's big backyard The cold dark world that lies at the farthest reaches of our solar system holds a vast collection of secrets and for most of human history we had no idea anything was out there But driven by curiosity and equipped with new technology astronomers have determined that beyond the orbit of Neptune are countless icy comets strange particles that dance under the influence of the sun and signs of undiscovered planets To learn more about these far flung objects scientists have finally

begun to explore the distant solar system finding answers to age old questions at the same time that they encounter new mysteries With Ron Miller s incredible illustrations and photographs from NASA probes and telescopes The Big Backyard takes us on a tour through the solar system s most obscure neighborhoods and into its darkest corners to places beyond the limits of the human eye Miller expertly describes the formation of the solar system and the history of the exploration of the outer solar system before delving into the latest discoveries and missions Read on to learn what sorts of objects orbit at such extreme distances what happens at the boundary between the sun s influence and interstellar space whether there is such a thing as the mysterious Planet X and how life on Earth could not exist without the happenings at the edge of the solar system
