

The orbit of the MOON

Lunar month

The Moon completes one orbit around the Earth (a sidereal month), in 27.3 days. Because the Earth is also orbiting the Sun, it takes two more days for the Moon to complete its cycle of phases (a synodic month).

Elliptical orbit

The Moon's orbit has an elliptical (oval) shape, although it looks almost like a circle.

Apsidal precession

The Moon's elliptical orbit orientation changes its orientation, or precesses, with a period of 8.85 years.

Drifting away

Every year the Moon's orbit is expanding, taking it farther away from Earth by an average of 3.8 centimeters.

Nodal precession

The plane of the lunar orbit is tilted 5 degrees relative to Earth's orbit around the Sun. It precesses in an 18.6-year cycle.

and Michel Ardan begins the five day trip to the moon *All Around the Moon* Jules Verne, 2021-03-22 Around the Moon also translated as Circling the Moon and All Around the Moon is the sequel to Jules Verne's 1865 novel From the Earth to the Moon. It's a science fiction tale which continues the trip to the moon that was only begun in the first novel **All Around The Moon (Illustrated)** Jules Verne, Edward Roth, 2014-03-29 Around the Moon French Autour de la Lune 1870 Jules Verne's sequel to From the Earth to the Moon is a science fiction novel continuing the trip to the moon which left the reader in suspense after the previous novel. It was later combined with From the Earth to the Moon to create A Trip to the Moon and Around It. The three travelers undergo a series of adventures and misadventures during the rest of the journey including disposing of the body of a dog out a window suffering intoxication by gases and making calculations leading them briefly to believe that they are to fall back to Earth. During the latter part of the voyage it becomes apparent that the gravitational force of their earlier encounter with the asteroid has caused the projectile to deviate from its course. The projectile enters lunar orbit rather than landing on the moon as originally planned. Barbicane, Ardan, and Nicholl begin geographical observations with opera glasses. The projectile then dips over the northern hemisphere of the moon into the darkness of its shadow. It is plunged into extreme cold before emerging into the light and heat again. They then begin to approach the moon's southern hemisphere. From the safety of their projectile they gain spectacular views of Tycho, one of the greatest of all craters on the moon. The three men discuss the possibility of life on the moon and conclude that it is barren. The projectile begins to move away from the moon towards the dead point, the place at which the gravitational attraction of the moon and Earth becomes equal. Michel Ardan hits upon the idea of using the rockets fixed to the bottom of the projectile which they were originally going to use to deaden the shock of landing to propel the projectile towards the moon and hopefully cause it to fall onto it thereby achieving their mission **All Around the Moon Illustrated** , 2021-03-28 Around the Moon 1870 Jules Verne's sequel to From the Earth to the Moon is a science fiction novel which continues the trip to the Moon which was only partially described in the previous novel. All Around the Moon Jules Verne, 2020-05-04 After being fired out of the giant Columbiad, the bullet shaped projectile along with its three passengers Barbicane Nicholl and Michel Ardan begins the five day trip to the moon. After a close collision with a meteor, the three astronauts discover that the gravitational force of this satellite has sent them into an orbit around the moon. As Barbicane, Ardan, and Nicholl begin geographical observations with opera glasses, they gain spectacular views of Tycho, one of the greatest of all craters on the moon. But then the projectile begins to move slowly away from the moon towards the dead point, a place of which the gravitational attraction of the moon and earth becomes equal. Michel Ardan then hits upon the idea of using the rockets fixed to the bottom of the projectile, but the rockets are fired too late and the projectile falls to the earth at a speed of 115,200 miles per hour.

All Around the Moon Jules Verne, 2017-04-29 How is this book unique? Font adjustments, the great windlass was presently rolled away, the tackle and scaffolding were removed, and in a short space of time the great mouth of the Columbiad was completely rid of all obstructions.
