Arterial Pollution:

Arterial Pollution H. Peeters, 2013-03-09 This two week course on Arterial Pollution covered the field of atherosclerosis as a disease entity and includes its anatomical, physiopathological, epidemiologic, preventive and therapeutic aspects. With the cooperation of an outstanding group of international lecturers we have been able to present an overview of the disease and its accidents as it stands today. Such a scope differs greatly from the narrow workshops which only consider biochemical disorders e.g. the lipoproteins or the risk factors. We believe it was timely to study the entire physiopathological entity of arterial pollution and we included all aspects of the disease in one single sweep. We are grateful to the NATO Advanced Institute Programs for accepting this topic on the list of their sponsored initiatives and especially Mr di Lullo for his personal care. Whether we succeeded was proved by the audience to the NATO Advanced Study Institute at Maratea in September 1981 and will become clearer through the audience these proceedings will gain in the medical community. Basic Sciences for MCEM Chetan Trivedy, Matthew Hall, Harold Ellis, 2016-05-15 This book is a dedicated resource for those sitting the Part A of the MCEM Membership of the College of Emergency Medicine examination. It forms an essential revision guide for emergency trainees who need to acquire a broad understanding of the basic sciences which underpin their approach to clinical problems in the emergency department. Common clinical scenarios are used to highlight the essential underlying basic science principles, providing a link between clinical management and a knowledge of the underlying anatomical, physiological, pathological and biochemical processes. Multiple choice questions with reasoned answers are used to confirm the candidate's understanding and for self-testing. Unlike other recent revision books which provide MCQ questions with extended answers, this book uses clinical cases linked to the most recent basic science aspects of the CEM syllabus to provide a book that not only serves as a useful revision resource for the Part A component of the MCEM examination but also a unique way of understanding the processes underlying common clinical cases seen every day in the emergency department. This book is essential for trainees sitting the Part A of the MCEM exam and for clinicians and medical students who need to refresh their knowledge of basic sciences relevant to the management of clinical emergencies.
