Competition and Structure Albert Breton, 2000-06-05 The essays in this volume written by well known economists and other social scientists from North America Europe and in one case Australia share to an unusual degree a common concern with the competitive mechanisms that underlie collective decisions and with the way they are embedded in institutional settings This gives the book a unitary inspiration whose value is clear from the new understanding and insights its chapters provide on important theoretical and practical issues such as the social dimension and impact of trust the management of information in bureaucratic settings the role of political parties in constitutional evolution inter level rivalry and reassignments of powers in federal and unitary systems of government the impact of ethnicity and nationalism on federal institutions or arrangements and the response of governments and overarching institutions of globalization

International Trade and Labor Markets Carl Davidson, Steven Joseph Matusz, 2004 **Three Essays on Productivity (RLE: Business Cycles)** Mark J. Lasky, 2015-03-27 The behaviour of US productivity since this book was originally

published in 1994 has added new relevance to the relationship between profits and productivity. In the long run, productivity growth determines the economic standard of living. This book is divided into three parts: the basis of the first is the empirical finding that, controlling for normal business cycle effects, productivity grows faster when profits have been low than otherwise. The second part discusses how to measure marginal cost using time series data, and the third tests a basic assumption that productivity growth is exogenous to labour and capital.

The Political Economy of Globalization Satya Dev

Gupta, 2012-12-06 Globalization is transforming the world at an accelerated pace. Integration of the world continues, widening and intensifying international linkages in economic, political, and social relations. Liberalization of trade and finance, lubricated by revolutionary changes in information technology, has resulted in significant economic growth at the global level. On the other hand, the process of globalization is changing the nature of production relations, threatening the traditional roles of the nation state and carrying with it far-reaching implications for sustainable growth, development, and the environment. Although both developed and developing countries are actively participating in this saga of globalization, nearly ninety countries, as the United Nations Human Development Report 1996 indicates, are worse off economically than they were ten years ago, leading to global polarization between haves and have-nots. The report further indicates that the gap between the per capita incomes of the industrialized world and the developing countries, far from narrowing, has more than tripled during the last thirty years. Further, a majority of the countries benefitting from this globalization drive have seen a rise in inequality and poverty. This failure of market-driven globalization to reward the benefits equitably led the United Nations to proclaim 1996 as the International Year for the Eradication of Poverty (IYEP) and the decade of 1997-2006 as the international decade for the eradication of poverty and to promote people-centered sustainable development.
