Jonathan Shaw, Bernard Goffinet, 2000-08-31 A comprehensive and up to date overview of the morphology systematics ecology and evolution of this fascinating group of plants *Cell and Developmental Biology of Arabinogalactan-Proteins* Eugene A. Nothnagel, Antony Bacic, A.E. Clarke, 2012-12-06 Arabinogalactan proteins are distributed throughout the plant kingdom and are present in leaves stems roots floral parts and seeds At the subcellular level AGPs are localized on the plasma membrane in the cell wall in secretory and endocytotic pathway organelles in stylar and root secretions and in the medium of cultured cells The widespread distribution of AGPs indicates that they perform important functions An expansion of knowledge regarding AGPs has been initiated and sustained through new experimental approaches including the development of monoclonal antibody probes and cloning of cDNAs corresponding to core polypeptides Regulated expression and other evidence points to the involvement of AGPs in plant reproductive development pattern formation and somatic embryogenesis as well as in the processes of cell division cell expansion and cell death AGPs also have an importance to industry One example is gum arabic an exudate from *Acacia senegal* a mixture of AGPs and polysaccharides which has unique viscosity and emulsifying properties that have led to many uses in the food as well as other industries *Reproductive Biology of Plants* Kishan Gopal Ramawat, Jean-Michel Merillon, K. R. Shivanna, 2016-04-19 Reproductive biology is the basis of species improvement and a thorough understanding of this is needed for plant improvement whether by conventional or biotechnological methods This book presents an up to date and comprehensive description of reproduction in lower plants gymnosperms and higher plants It covers general plant biology pollination *Post-translational Modifications in Plants* N. these important plant phenotypes are either not clearly expressed or entirely lacking And in one of the most exciting developments in Plant Biology efficient homologous recombination occurs in the moss *Physcomitrella patens* The ability to perform efficient homologous recombination Le gene knock outs in *P. patens* is at present unique amongst all plants and represents an extremely powerful technique for the functional analysis of many plant genes Over the past 5 years a world wide community of moss researchers has evolved A highly successful Moss conference has been held annually 1998 Mumbai India 1999 Carbondale IL USA 2000 Villars Switzerland 2001 Okazaki Japan 2002 Ambleside UK 2003 St Louis MO USA with Moss 2004 planned to be held in Freiburg Germany These conferences have been instrumental in the creation development of strong collaborative ties and the free exchange of both ideas and materials *Bryology for the Twenty-first Century*
