Brainlike Computing And Intelligent Information Systems:

Brain-Like Computing and Intelligent Information Systems Shunichi Amari, Nikola Kasabov, 1998 This book introduces a new rapidly expanding area in computer science and artificial intelligence Brain like computing combines traditional computational techniques with cognitive models inspired by the brain for building information systems Image and speech processing creative planning and design adaptive control knowledge acquisition and database mining are only a few areas where brain like computing is applied

Intelligent Systems Bogdan M. Wilamowski, J. David Irwin, 2018-10-03 The Industrial Electronics Handbook Second Edition combines traditional and newer more specialized knowledge that will help industrial electronics engineers develop practical solutions for the design and implementation of high power applications Embracing the broad technological scope of the field this collection explores fundamental areas including analog and digital circuits electronics electromagnetic machines signal processing and industrial control and communications systems It also facilitates the use of intelligent systems such as neural networks fuzzy systems and evolutionary methods in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components Enhancing its value this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal one of the largest and most respected publications in the field As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made substantial contributions to the solution of very complex problems As a result the field of computational intelligence has branched out in several directions For instance artificial neural networks can learn how to classify patterns such as images or sequences of events and effectively model complex nonlinear systems Simple and easy to implement fuzzy systems can be applied to successful modeling and system control Illustrating how these and other tools help engineers model nonlinear system behavior determine and evaluate system parameters and ensure overall system control Intelligent Systems Addresses various aspects of neural networks and fuzzy systems Focuses on system optimization covering new techniques such as evolutionary methods swarm and ant colony optimizations Discusses several applications that deal with methods of computational intelligence Other volumes in the set Fundamentals of Industrial Electronics Power Electronics and Motor Drives Control and Mechatronics Industrial Communication Systems

Evolving Connectionist Systems Nikola Kasabov,2013-03-14 Many methods and models have been proposed for solving difficult problems such as prediction planning and knowledge discovery in application areas such as bioinformatics speech and image analysis Most however are designed to deal with static processes which will not change over time Some processes such as speech biological information and brain signals are not static however and in these cases different models need to be used which can trace and adapt to the changes in the processes in an incremental on line mode and often in real time This book presents generic computational models and techniques that can be used for the development of evolving adaptive modelling systems The models and techniques used are connectionist based as the evolving brain is a highly suitable paradigm and where possible existing connectionist models have been used and extended The first part of the book covers methods and techniques and the second focuses on applications in bioinformatics brain study speech image and multimodal systems It also includes an extensive bibliography and an extended glossary Evolving Connectionist Systems is aimed at anyone who is interested in developing adaptive models and systems to solve challenging real world problems in computing science or engineering It will also be of interest to researchers and students in life sciences who are interested in finding out how information science and intelligent information processing methods can be applied to their domains

Artificial Neural Networks - ICANN 2006 Stefanos Kollias,Andreas Stafylopatis,Wlodzislaw Duch,Erkki Oja,2006-09-01 The two volume set LNCS 4131 and LNCS 4132 constitutes the refereed proceedings of the 16th International Conference on Artificial Neural Networks ICANN 2006 The set presents 208 revised full papers carefully reviewed and selected from 475 submissions This first volume presents 103 papers organized in topical sections on feature

Kasabov, 2007-08-23 This second edition of the must read work in the field presents generic computational models and techniques that can be used for the development of evolving adaptive modeling systems as well as new trends including computational neuro genetic modeling and quantum information processing related to evolving systems New applications such as autonomous robots adaptive artificial life systems and adaptive decision support systems are also covered

Biologically Motivated Computer Vision Seong-Whang Lee, Heinrich H. Bülthoff, Tomaso Poggio, 2000-05-03 It is our great pleasure and honor to organize the First IEEE Computer Society International Workshop on Biologically Motivated Computer Vision BMCV 2000 The workshop BMCV 2000 aims to facilitate debates on biologically motivated vision systems and to provide an opportunity for researchers in the area of vision to see and share the latest developments in state of the art technology The rapid progress being made in the field of computer vision has had a tremendous impact on the modeling and implementation of biologically motivated computer vision A multitude of new advances and findings in the domain of computer vision will be presented at this workshop By December 1999 a total of 90 full papers had been submitted from 28 countries To ensure the high quality of workshop and proceedings the program committee selected and accepted 56 of them after a thorough review process Of these papers 25 will be presented in 5 oral sessions and 31 in a poster session The papers span a variety of topics in computer vision from computational theories to their implementation In addition to these excellent presentations there will be eight invited lectures by distinguished scientists on hot topics We must add that the program committee and the reviewers did an excellent job within a tight schedule

Natural Ethical Facts William D. Casebeer, 2001 Naturalizing ethics has been a problematic philosophic enterprise The author attempts a synoptic reconciliation of the sciences with a naturalized conception of morality beginning with a Quinean refutation of the naturalistic fallacy and the open question argument We can improve our understanding of the nature of moral theory and its place in moral judgment by treating morality as a natural phenomenon subject to constraints from and ultimately reduced to the cognitive and biological sciences Treating morality as a matter of proper biological function partially fixed by our evolutionary history and with an emphasis on skillful action in the world now sheds light on the underlying native connectionist architecture of moral cognition The author discusses practical implications regarding the nature and form of our collective character development institutions and our methods for moral reasoning that arise from this approach reaffirming Deweyian and Aristotelian points about the importance of sociability friendship and liberal democratic forms of social organization for human flourishing

Independent Component Analysis Stephen Roberts, Richard Everson, 2001-03 Independent Component Analysis ICA has recently become an important tool for modelling and understanding empirical datasets It is a method of separating out independent sources from linearly mixed data and belongs to the class of general linear models ICA provides a better decomposition than other

well known models such as principal component analysis This self contained book contains a structured series of edited papers by leading researchers in the field including an extensive introduction to ICA The major theoretical bases are reviewed from a modern perspective current developments are surveyed and many case studies of applications are described in detail The latter include biomedical examples signal and image denoising and mobile communications ICA is discussed in the framework of general linear models but also in comparison with other paradigms such as neural network and graphical modelling methods The book is ideal for researchers and graduate students in the field
