Brain Mechanisms In Problem Solving And Intelligence A Lesion Survey Of The Rat Brain:

Brain Mechanisms in Problem Solving and Intelligence Robert Thompson, Francis M. Crinella, Jen Yu, 2013-11-21

This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat. It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence. During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability. Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities. Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain. One objective of this volume was to make these maps available in a single source. Another was to provide a description of learning syndromes arising from local lesions to different parts of the brain.

[Aging and Neuropsychological Assessment](#) Asenath LaRue, 2013-06-29 It is a privilege to be asked to write the foreword for so excellent a book so timely and so much needed by the field. Not only is it most unusual these days to

have a single authored volume on so broad a topic but Dr La Rue has done a superb job of providing both a scholarly treatise and a practical handbook With a burgeoning elderly population and the corresponding increase in geriatric psychopathology the needs of mental health services are exceeding by far the supply of appropriate providers In an effort to meet this need psychiatry medicine neurology pharmacology psychology nursing and social work have all made the provision of training in geriatrics and gerontology a high priority but I fear we are losing the race For example multidisciplinary teams that assess diagnose and treat mental health disorders in elderly patients are incomplete without clinical psychologists and neuropsychologists and yet there is barely a handful of clinical psychologists trained in dealing with geriatric patients We can count on our fingers the additional ones graduated each year In hospitals clinics and private practices across the country otherwise skilled psychologists are unprepared to respond to the special mental health needs of the elderly A few CME programs are helping to address this need but they are clearly not enough

Neuropsychological Evaluation of the Spanish Speaker

Alfredo Ardila, Monica Rosselli, Antonio E. Puente, 2013-06-29 This book is the culmination of a research program conducted in Colombia during the past several years The fundamental aim of the program was to develop neuropsychological tests for Spanish speakers especially elderly individuals and those with limited educational attainment The lack of norms for these populations represents a significant practical problem not only in developing countries but also in more developed countries For example norms are usually obtained with middle class Anglo Saxon English speaking populations often university students and such norms do not usually include individuals older than 65 years Furthermore very few neuropsychological tests have been developed for Spanish speakers frequently tests are translated into Spanish often poor translations at that but the norms used are still those obtained from English speaking populations This volume summarizes the normative results of this research program We anticipate that these tests and norms will be particularly useful in the neuropsychological evaluation of Spanish speakers especially those with limited educational attainment and the elderly The United States represents the fifth largest Spanish speaking country in the world after Mexico Spain Argentina and Colombia with over 20 million speakers It is anticipated that by the year 2025 there will be as many Hispanics in the United States as members of all other ethnic minority groups combined Further about 10% of the U S population are considered functionally illiterate with Hispanics representing an unusually large segment

The Nature of

Intelligence Gregory R. Bock, Jamie A. Goode, Kate Webb, 2003-10-31 Evolutionary psychology and behavioural genetics are

two successful and important fields in the study of human behaviour but practitioners in these subjects have different conceptions of the nature of human intelligence Evolutionary psychologists dispute the existence of general intelligence and emphasise the differences among species They argue that natural and sexual selection would be expected to produce intelligences that are specialised for particular domains as encountered by particular species Behavioural geneticists consider general intelligence to be the most fundamental aspect of intelligence and concentrate on the differences between individuals of the same species This exciting book features papers and discussion contributions from leading behavioural geneticists evolutionary psychologists and experts on intelligence that explore the differences and the tensions between these two approaches The nature of g or general intelligence is discussed in detail as is the issue of the heritability of intelligence The alternative approaches that emphasise domain specific intelligences are explored alongside wide ranging discussions on a broad range of issues such as the biological basis for intelligence animal models and changes in IQ scores over time
