Optimised Radar Processors Alfonso Farina, 1987 Annotation The first volume in a new series Contributed papers give a theory of radar signal processing at a level accessible and useful to practicing radar engineers concerned with design and analysis No index Annotation c 2003 Book News Inc Portland OR booknews com **Parabolic Equation Methods for Electromagnetic Wave Propagation** Mireille Levy, 2000 Provides scientists and engineers with a tool for accurate assessment of diffraction and ducting on radio and radar systems The author gives the mathematical background to parabolic equations modeling and describes simple parabolic equation algorithms before progressing to more advanced topics such as domain truncation the treatment of impedance boundaries and the implementation of very fast hybrid methods combining ray tracing and parabolic equation techniques The last three chapters are devoted to scattering problems with application to propagation in urban environments and to radar cross section computation Annotation copyrighted by Book News Inc Portland OR **Knowledge-Based Intelligent Information and Engineering Systems** Vasile Palade, 2003-08-28 During recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work While some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate The very fast pace of change in processor and information technology has been the main driving force behind this development Advances in automation and especially Artificial Intelligence AI have enabled the formation of a rather unique team with human and electronic members The team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies These include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering

Electromagnetic Mixing Formulas and Applications A. H. Sihvola, 1999 This book covers the homogenization principles and mixing rules for determining the macroscopic dielectric and magnetic properties of different types of media Sihvola electromagnetics Helsinki U of Technology Finland discusses subjects such as the characteristic differences between a mixture and its parts and ways that mixing results are applied to different materials in geophysics and biology Distributed by INSPEC Annotation copyrighted by Book News Inc Portland OR The Record of the IEEE ... International Radar Conference , 1990 Optimization Methods in Electromagnetic Radiation Thomas S. Angell, Andreas Kirsch, 2006-05-11 The subject of antenna design primarily a discipline within electrical engineering is devoted to the manipulation of structural elements of and or the electrical currents present on a physical object capable of supporting such a current Almost as soon as one begins to look at the subject it becomes clear that there are interesting mathematical problems which need to be addressed in the first instance simply for the accurate modelling of the electromagnetic fields produced by an antenna The description of the electromagnetic fields depends on the physical structure and the background environment in which the device is to operate It is the coincidence of a class of practical engineering applications and the application of some interesting mathematical optimization techniques that is the motivation for the present book For this reason we have thought it worthwhile to collect some of the problems that have inspired our research in applied mathematics and to present them in such a way that they may appeal to two different audiences mathematicians who are experts in the theory of mathematical optimization and who are interested in a less familiar and important area of application and engineers who confronted with problems of increasing sophistication are interested in seeing a systematic mathematical approach to problems of interest to them We hope that we have found the right balance to be of interest to both audiences It is a difficult task Our ability to produce these devices at all most designed for a particular purpose leads quite soon to a desire to optimize the design in various ways The mathematical problems associated with attempts to optimize performance can become quite sophisticated even for simple physical structures
