Anesthesia And Coronary Artery Surgery:

Anesthesia and Coronary Artery Surgery Sait Tarhan,1986 *Beating Heart Bypass Surgery and Minimally Invasive Conduit Harvesting* V. Guliemos,2003-10-31 In the early days of cardiac surgery but also in the following four decades median sternotomy and cardiopulmonary bypass were nearly always included in cardiac surgical procedures Less invasive surgical techniques were developed with the aim of reducing perioperative trauma without compromising the surgical result and things became more complex for cardiac surgeons They now often had to consider the surgical access of choice and whether cardiopulmonary bypass should be used or not Since the mid 1990s not only have several novel minimally invasive surgical techniques been presented but also further refinements have been recommended from time to time This work comes to fill a gap in the field of coronary artery bypass grafting and conduit harvesting in cardiac surgery by gathering the mature version of such new less invasive techniques combining safety effectiveness simplicity sometimes even reducing procedural costs and that always for the patient s and for the surgeon s sake **Perioperative Care in Cardiac Anesthesia and Surgery** Davy C. H. Cheng,Tirone E. David,2006 Written by eminent cardiac anesthesiologists and surgeons this handbook is a complete practical guide to perioperative care in cardiac surgery The book addresses every aspect of cardiopulmonary bypass management and fast track and traditional cardiac anesthesia and describes all surgical techniques with emphasis on postoperative considerations Close attention is also given to routine care and management of complications in the cardiac surgical recovery unit Coverage includes up to date information on cardiac and neurologic monitoring off pump surgery new devices for anastomosis robotic surgery and neurologic complications and outcomes Tables algorithms and 15 appendices summarize key facts protocols and clinical decisions *Cardiac Anesthesia* Fawzy G. Gotta,2012-12-06 On 16 October 1846 an itinerant New England dentist named William T G Morton proved the anesthetic effect of diethyl ether in a public demonstration in the ether dome of the Bulfinch Building of the Massachusetts General Hospital in Boston The patient Gilbert Abbott suffered no pain and the surgeon Dr John C Warren was able to complete a suture ligature of a vas

cular tumor of the jaw without the hurry that until then was so necessary The operation proved a failure since the tumor recurred but the demonstration of ether's anesthetic effect was a great success Operative pain was conquered and surgery could advance from a crude and unscientific practice where speed was paramount and the major body cavities could not be entered into the unique blend of science and art that it is now Gentlemen this is no humbug supposedly muttered Warren perhaps the last noncontroversial assessment of anesthesiology to be made by a surgeon The screams of resisting patients in pain were stilled and quiet entered the operating room for the first time But the new science of pain relief was quickly wrapped in controversy An argument immediately arose as to who could legitimately claim primacy for the discovery Morton's attempt to hide the true nature of his anesthetic agent coupled with an effort to patent the discovery clouded his reputation and stimulated other claimants to push themselves forward
