Animal Behaviour Volume 3 Genes Development And Learning:

Animal Behaviour: Genes, development and learning Tim Halliday, Peter James Bramwell Slater, 1983 An Introduction to Animal Behaviour Aubrey Manning, Marian Stamp Dawkins, 2012-03-26 A beautifully written introduction to the fundamentals of animal behaviour this revised and updated edition is now in full colour *Essentials of Animal Behaviour* Peter J. B. Slater, 1999-05-13 *Essentials of Animal Behaviour* is an introduction to the study of animal behaviour and is primarily intended for first or second year undergraduates attending short courses in the subject The book concentrates on putting across the basic principles as briefly and lucidly as possible with the aid of carefully selected examples from both the recent and classic literature together with numerous illustrations It will enthuse readers with this active and exciting area of research and will lay a solid foundation on which further study may be based Its simple and readable style helped by an extensive glossary will also make it useful to senior level school students their teachers and those with a general interest in the subject It will be particularly rewarding for all those needing the basics in animal behaviour behavioural ecology and comparative psychology *Evolution and Learning* R. C. Bolles, M. D. Beecher, 2013-08-21 First published in 1987 Evolutionary theory and learning theory have for a long time developed in quite separate traditions The purpose of this book is partly to celebrate new developments in the two theories by displaying some of the work of this new breed of scholar It is the editors hope that they can encourage others to look more carefully at the mechanisms that make learning an evolutionary consideration and evolution a learning theory consideration *Developmental Plasticity and Evolution* Mary Jane West-Eberhard, 2003-03-13 The first comprehensive synthesis on development and evolution it applies to all aspects of development at all levels of organization and in all organisms taking advantage of modern findings on behavior genetics endocrinology molecular biology evolutionary theory and phylogenetics to show the connections between developmental mechanisms and evolutionary change This book solves key problems that have impeded a definitive synthesis in the past It uses new concepts and specific examples to show how to relate environmentally sensitive development to the genetic theory of adaptive evolution and to explain major patterns of change In this book development includes not only embryology and the ontogeny of morphology sometimes portrayed inadequately as governed by regulatory genes but also behavioral development and physiological adaptation where plasticity is mediated by genetically complex mechanisms like hormones and learning The book shows how the universal qualities of phenotypes modular organization and plasticity facilitate both integration and change Here you will learn why it is wrong to describe organisms as genetically programmed why environmental induction is likely to be more important in evolution than random mutation and why it is crucial to consider both selection and developmental mechanism in explanations of adaptive evolution This book satisfies the need for a truly general book on development plasticity and evolution that applies to living organisms in all of their life stages and environments Using an immense compendium of examples on many kinds of organisms from viruses and bacteria to higher plants and animals it

shows how the phenotype is reorganized during evolution to produce novelties and how alternative phenotypes occupy a pivotal role as a phase of evolution that fosters diversification and speeds change The arguments of this book call for a new view of the major themes of evolutionary biology as shown in chapters on gradualism homology environmental induction speciation radiation macroevolution punctuation and the maintenance of sex No other treatment of development and evolution since Darwin s offers such a comprehensive and critical discussion of the relevant issues Developmental Plasticity and Evolution is designed for biologists interested in the development and evolution of behavior life history patterns ecology physiology morphology and speciation It will also appeal to evolutionary paleontologists anthropologists psychologists and teachers of general biology

The Human Evolutionary Transition Magnus Enquist,Stefano Ghirlanda,Johan Lind,2023-02-28 A major new theory of why human intelligence has not evolved in other species The Human Evolutionary Transition offers a unified view of the evolution of intelligence presenting a bold and provocative new account of how animals and humans have followed two powerful yet very different evolutionary paths to intelligence This incisive book shows how animals rely on robust associative mechanisms that are guided by genetic information which enable animals to sidestep complex problems in learning and decision making but ultimately limit what they can learn Humans embody an evolutionary transition to a different kind of intelligence one that relies on behavioral and mental flexibility The book argues that flexibility is useless to most animals because they lack sufficient opportunities to learn new behavioral and mental skills Humans find these opportunities in lengthy childhoods and through culture Blending the latest findings in fields ranging from psychology to evolutionary anthropology The Human Evolutionary Transition draws on computational analyses of the problems organisms face extensive overviews of empirical data on animal and human learning and mathematical modeling and computer simulations of hypotheses about intelligence This compelling book demonstrates that animal and human intelligence evolved from similar selection pressures while identifying bottlenecks in evolution that may explain why human like intelligence is so rare
