With SAS, you can focus more on conceptual issues in statistical analysis and less on the mechanics of performing mathematical operations by hand. Main topics include how to use the SAS windowing environment to write and submit SAS programs, how to create SAS data sets and modify the variables that they contain, basic descriptive statistics, measures of central tendency and variability, frequency tables and graphs, correlation and regression, t tests, single sample, independent and paired samples, analysis of variance, ANOVA, both one-way and factorial, and the chi-square test of independence. Even if you are new to statistics and computers, you soon will be recording research data, writing SAS programs, and interpreting the results.
