Architecture As Space:

Architecture as Space Bruno Zevi, 1957 **The Architecture of Space--the Space of Architecture** Lars Marcussen, 2007 **Architecture as Space** Bruno Zevi, 1974 Why Architecture Matters Paul Goldberger, 2009-11-03

Why Architecture Matters is not a work of architectural history or a guide to the styles or an architectural dictionary though it contains elements of all three The purpose of Why Architecture Matters is to come to grips with how things feel to us when we stand before them with how architecture affects us emotionally as well as intellectually with its impact on our lives Architecture begins to matter writes Paul Goldberger when it brings delight and sadness and perplexity and awe along with a roof over our heads He shows us how that works in examples ranging from a small Cape Cod cottage to the vast flowing Prairie houses of Frank Lloyd Wright from the Lincoln Memorial to the highly sculptural Guggenheim Bilbao and the Church of Sant Ivo in Rome where simple geometries create a work of architecture that embraces the deepest complexities of human imagination Based on decades of looking at buildings and thinking about how we experience them the distinguished critic raises our awareness of fundamental things like proportion scale space texture materials shapes light and memory Upon completing this remarkable architectural journey readers will enjoy a wonderfully rewarding new way of seeing and experiencing every aspect of the built world

ARCHITECTURE SPACE + POETRY RAVI YADAV, 2023-02-09 An architecture poetry book is a collection of poems that explore the beauty and meaning behind the design and construction of buildings and structures The poems in this book may delve into the emotions and thoughts of architects builders and inhabitants as they interact with the spaces they create and inhabit They may also examine the various elements of architecture such as lines shapes textures and light With imagery and language that captures the essence of architectural form and function these poems invite the reader to see the world in new ways and to appreciate the role that architecture plays in shaping our experiences and memories Whether considered as works of art in their own right or as commentaries on the built environment these poems offer a unique perspective on the structures that surround us and the lives that we lead within them

Domestic Architecture and the Use of Space Susan Kent, 1993-06-25 Domestic Architecture and the Use of Space investigates the relationship between the built environment and the organisation of space The contributors are classical and prehistoric archaeologists anthropologists and architects who from their different backgrounds are able to provide some important and original insights into this relationship

Architecture, Space and Memory of Resurrection in Northern Ireland Mohamed Gamal Abdelmonem, Gehan Selim, 2019-04-25 Northern Ireland has a complex urbanism with multilayered socio spatial politics In this environment issues of communication self representation and expression of identity are central to the experience of urban space and architecture where the dichotomy of division and shared living are spatially exercised in everyday life Unlike other studies in the area this book focuses on the everyday experiences of local communities in both public and private spheres issues of shareness challenging conventional approaches to divided cities The book aims to

layer its narratives of architectural and social developments as an urban experience in post conflict settings over the past two decades

Architecture and the Unconscious John Shannon Hendrix, Lorens Eyan Holm, 2016-06-17 There are a number of recent texts that draw on psychoanalytic theory as an interpretative approach for understanding architecture or that use the formal and social logics of architecture for understanding the psyche But there remains work to be done in bringing what largely amounts to a series of independent voices into a discourse that is greater than the sum of its parts in the way that say the architect Peter Eisenman was able to do with the architecture of deconstruction or that the historian Manfredo Tafuri was able to do with the Marxist critique of architecture The discourse of the present volume focuses specifically for the first time on the subject of the unconscious in relation to the design perception and understanding of architecture It brings together an international group of contributors who provide informed and varied points of view on the role of the unconscious in architectural design and theory and in doing so expand architectural theory to unexplored areas enriching architecture in relation to the humanities The book explores how architecture engages dreams desires imagination memory and emotions how architecture can appeal to a broader scope of human experience and identity Beginning by examining the historical development of the engagement of the unconscious in architectural discourse and the current and historical theoretical and practical intersections of architecture and psychoanalysis the volume also analyses the city and the urban condition

Understanding Architecture Hazel Conway, Rowan Roenisch, 2006-03-17 A comprehensive introduction to architecture and architectural history and exceptional in its approach this book explores architecture as a current practice in relation to history and in relation to the wider context of cultures conservation and the environment This new edition brings in the new emphasis on sustainability urbanism urban regeneration and cultural identity in order to take a holistic approach to the subject of architecture Highly illustrated this book enables the reader to make sense of the experience of architecture and the built environment by understanding more about the form construction meaning and history of the subject

The Routledge Handbook of Architecture, Urban Space and Politics, Volume I Nikolina Bobic, Farzaneh Haghighi, 2022-10-28 For architecture and urban space to have relevance in the 21st Century we cannot merely reignite the approaches of thought and design that were operative in the last century This is despite or because of the nexus between politics and space often being theorized as a representation or by product of politics As a symbol or an effect the spatial dimension is depoliticized Consequently architecture and the urban are halted from fostering any systematic change as they are secondary to the event and therefore incapable of performing any political role This handbook explores how architecture and urban space can unsettle the unquestioned construct of the spatial politics of governing Considering both ongoing and unprecedented global problems from violence and urban warfare the refugee crisis borderization detention camps terrorist attacks to capitalist urbanization inequity social unrest and climate change this handbook provides a comprehensive and multidisciplinary research focused on the complex nexus of politics architecture and urban space Volume I starts by pointing

out the need to explore the politics of spatialization to make sense of the operational nature of spatial oppression in contemporary times The operative and active political reading of space is disseminated through five thematic Violence and War Machines Security and Borders Race Identity and Ideology Spectacle and the Screen and Mapping Landscapes and Big Data This first volume of the handbook frames cutting edge contemporary debates and presents studies of actual theories and projects that address spatial politics This Handbook will be of interest to anyone seeking to meaningfully disrupt the reduction of space to an oppressive or neutral backdrop of political realities Chapters 1 and 23 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution CC BY 4.0 license
