Basic Physiology is an introduction to vertebrate physiology stressing human physiology at the organ level and including requisite anatomy integrated with function. One chapter deals solely with topographic anatomy in atlas form and microscopic anatomy of the principal tissues of the body. Additional chapters cover cellular and general physiology, nervous system, muscle, blood and tissue fluids, heart and circulation, respiration, digestion and absorption, intermediary metabolism, energy metabolism, temperature regulation, nutrition, kidney, endocrinology including hypophysis, reproduction, thyroids, parathyroids, adrenals and pancreas. All concepts are emphasized and well illustrated and controversial material is omitted. It is written at a level suited to undergraduate students who have had introductory courses in biology, chemistry and mathematics and to more advanced students who wish to review the basic concepts of physiology. This volume should be especially useful as a text for departments of biology, zoology, nursing, health and agricultural sciences that offer courses in vertebrate and human physiology. Basic Physiology is written by seven subject matter specialists who have considerable experience in teaching their specialty to undergraduates studying physiology and biology.
