

- A machine shop is a workshop where powerful machine tools are used to cut, shape, drill, and finish metals, plastics, glass, and wood. Machining refers to the creation of a useful component (such as an engine block) from raw materials (such as a block of aluminum).
- The processes carried out in machine shops are some of the fundamental processes necessary for the functioning of an industrialized society.
- While there are a number of more specialized machine shop processes that are specific to certain industries, there are a few fundamental machine shop processes that are common to most machine shops. Here are descriptions of some of those basic machine shop processes.

# Basic Machine Shop Theory

**William E. Hardman**

## **Basic Machine Shop Theory:**

**Shop Theory** James Anderson, Earl E. Tatro, 1974 An introductory textbook on machine shop theory and practice including information on basic machine tools bench operations metrology and career opportunities in the machine trades
