Australians And Their Environment An Introduction To Environmental Studies:

Australians and Their Environment Graeme Aplin, 1998 *Australians and Their Environment* Graeme Aplin, 1998
Australians and Their Environment introduces the broad and complex field of environmental studies in an Australian context. Emphasizing the need to include a wide range of perspectives, the book integrates varied approaches to environmental studies from philosophy and ethics through the social science and economics to the biophysical and physical sciences. The book begins with a discussion of concepts central to environmental understanding, debate, and decision making, and then applies these concepts to current environmental topics. Chapters cover natural cycles and biogeochemical processes, ecological concepts and relationships, economics and resource concepts, values and attitudes, politics and bureaucratic structures, planning and management techniques, Aboriginal resource use and management, biodiversity and reserves, forestry, fishing, mining, agriculture, energy and transport, water and waste management, and the urban environment. **Geographies of Australian Heritages** Roy Jones, Brian J. Shaw, 2017-11-30
In any settler and/or postcolonial society, heritage is a complex and contested topic that involves indigenous, imperial, and other migrant components. In Australia, this situation is compounded by the unique characteristics of the country's natural environment, the considerable diversity of its migrant intake, and the demographic and technological imbalances between its indigenous and settler populations. This volume brings together internationally recognized academics and emerging scholars whose expertise extends through the areas of tourism, planning, heritage management, environmental studies, and state and local government. Through a representative set of case studies from across the country's states and capital cities, the contributors demonstrate the range and diversity of heritage issues currently confronting Australia and consider possible ways of resolving these. **Australian urban land use planning** Nicole Gurran, 2011
Urban and regional planning is increasingly central to public policy in Australia and internationally. As cities and regions adapt to profound economic, societal, and technological shifts, new urban and environmental problems are emerging from inadequate systems of transport and infrastructure to declining housing affordability, biodiversity loss, and human-induced climate change. Australian urban land use planning provides a practical understanding of the principles, processes, and mechanisms for strategic and proactive urban governance. Substantially updated and expanded, this second edition explains and compares the legislation, policy, and plan-making, development assessment, and dispute resolution processes of Australia's eight state and territorial planning jurisdictions, as well as the changing role of the Commonwealth in environmental and urban policy. This new edition also extends the coverage of planning practice with a new chapter on planning for climate change, a more detailed treatment of planning for housing diversity and affordability, and a comprehensive analysis of the New South Wales planning system and its evolution over the last 30 years. Nicole Gurran is an associate professor in the Urban and Regional Planning Program at the University of Sydney. Her research focuses on comparative planning approaches to housing, ecological sustainability, and climate change.

Prior to joining the University of Sydney she practised as a planner in several state government roles focusing on local environmental plan making environmental management and housing policy She is on the Executive Board of the International Urban Planning and Environment Association *Australia, Oceania, & Antarctica* Kevin Hillstrom, Laurie Collier Hillstrom, 2003-11-19 A concise yet thorough overview of environmental issues problems and controversies facing Australia Oceania and Antarctica They are vast distant and scarcely populated Yet the environments of Australia Oceania and Antarctica are facing the same threats confronting the rest of the planet as well as some unique ones of their own How have human introduced species impacted Australia's natural order What new global conventions are helping close Antarctica's ozone hole And how is global climate change threatening the South Pacific's species rich coral reefs The region's governments are grappling with the spectre of global warming which if not meaningfully addressed by industrialized nations half a world away could produce rising sea levels capable of engulfing several states of Oceania and partially submerging portions of many other inhabited islands Australia Oceania and Antarctica tackles the difficult issues tough problems and political controversies surrounding these lands of extremes **Handbook of Corporate Sustainability** M. Siddique, 2011-01-01 Achieving corporate sustainability CS is one of the most difficult challenges facing organizations in the twenty first century This comprehensive Handbook examines the current status and future direction of sustainability frameworks and applications in the corporate environment Internationally reputed scholars portray the frameworks of CS practices in contemporary businesses They explore in detail these frameworks and the associated computer based modelling tools that companies are using or can use to aid their decision making with regards to CS and corporate social responsibility practices The contributors expertly investigate the future direction of model based applications in CS as well as related planning processes This innovative and informative Handbook will provide a timely reminder to scholars government agencies international bodies academics and practitioners that appropriate decision making and a correct understanding of these complex problems are essential to the success of CS planning *Following the Water* Kylie Carman-Brown, 2019-10-18 Water reflects culture This book is a detailed analysis of hydrological change in Australia's largest inland waterway in Australia the Gippsland Lakes in Victoria in the first 70 years of white settlement Following air water is our primal need Unlike many histories this book looks at the entire hydrological cycle in one place rather than focusing on one bit Deftly weaving threads from history hydrology and psychology into one *Following the Water* explores not just what settlers did to the waterscape but probes their motivation for doing so By combining unlikely elements together such as swamp drainage water proofing techniques and temperance lobbying the book reveals a web of perceptions about how water should be With this laid clear we can ask how different we are from our colonial forebears
