A Graphical Engineering Aid for VLSI Systems Paul J. Drongowski, 1985      Intelligent Systems L.S. Sterling, 2012-12-06  
Published in honour of the 70th birthday of Yoh Han Pao George S Dively Distinguished Professor of Engineering at Case Western Reserve University Cleveland Ohio this festschrift embraces a remarkably diverse set of topics Drawing from the fields of pattern recognition engineering artificial intelligence and artificial neural systems it is a fitting testament to the extraordinary breadth of his professional interests both in foundational research into the new technology of Intelligent Systems and in the application of that evolving technology to the solution of hard engineering problems In common with many scientists who build their reputations in one field before devoting their considerable energies and talents to another one by 1972 the year in which I met him for the first time Yoh Han had made significant contributions to laser technology in particular to the development of the highly accurate and stable lasers required for holographic recording purposes In conventional holography the information stored in a hologram produces a virtual image of the object characterised by it However Yoh Han became fascinated by the possibility of driving the process backwards of using the hologram as an associative memory device enabling previously stored information to be retrieved on the basis of partial cues It was this burgeoning interest which shaped his career for more than twenty years Just prior to 1972 my colleagues Professor Christopher Longuet Higgins and Dr      **The Publishers' Trade List Annual** ,1985      **American Book Publishing Record** ,1985      Efficient Use of Systems with Many Processors Robert J.
