How Not to Be Eaten Gilbert Waldbauer, 2021-04-06 At times this informative book turns wonderfully gross and lovely reminding us that there's an entire universe of largely unnoticed creatures all around us Audubon All animals must eat But who eats who and why or why not Because insects outnumber and collectively outweigh all other animals combined they comprise the largest amount of animal food available for potential consumption How do they avoid being eaten From masterful disguises to physical and chemical lures and traps predatory insects have devised ingenious and bizarre methods of finding food Equally ingenious are the means of hiding mimicry escape and defense waged by prospective prey in order to stay alive This absorbing book demonstrates that the relationship between the eaten and the eater is a central perhaps the central aspect of what goes on in the community of organisms By explaining the many ways in which insects avoid becoming a meal for a predator and the ways in which predators evade their defensive strategies Gilbert Waldbauer conveys an essential understanding of the unrelenting coevolutionary forces at work in the world around us

Why Don't Jumbo Jets Flap Their Wings? David Alexander, 2009-06-02 What do a bumble bee and a 747 jet have in common It s not a trick question The fact is they have quite a lot in common They both have wings They both fly And they re both ideally suited to it They just do it differently Why Don t Jumbo Jets Flap Their Wings offers a fascinating explanation of how nature and human engineers each arrived at powered flight What emerges is a highly readable account of two very different approaches to solving the same fundamental problems of moving through the air including lift thrust turning and landing The book traces the slow and deliberate evolutionary process of animal flight in birds bats and insects over millions of years and compares it to the directed efforts of human beings to create the aircraft over the course of a single century Among the many questions the book answers Why are wings necessary for flight How do different wings fly differently When did flight evolve in animals What vision knowledge and

technology was needed before humans could learn to fly Why are animals and aircrafts perfectly suited to the kind of flying they do David E Alexander first describes the basic properties of wings before launching into the diverse challenges of flight and the concepts of flight aerodynamics and control to present an integrated view that shows both why birds have historically had little influence on aeronautical engineering and exciting new areas of technology where engineers are successfully borrowing ideas from animals

Infested Brooke Borel,2015-04-08 Bed bugs are thriving across the globe from North and South America to Africa Asia and Europe For some time bed bugs were naively seen as a problem unique to developing countries but their love of high thread content sheets has set them up in five star residences in the United States Canada the United Kingdom and other parts of Europe as well Bed Bugs were first noticed in society by Americans in the early 1700 s Many believe sailboats returning from Europe unknowingly carried the bugs as cargo as sailors complained of being attacked as they slept in their cabins With the introduction of DDT in the 1950s bed bugs nearly disappeared But when DDT was banned in the 1970 s a wave of super bed bugs rejoiced Now up to 25% of residents in some cities have reported problems with the pests bordering on epidemic levels In fact history has never seen such widespread and intense bed bug infestations Our propensity for travel has left bed bugs with enviable frequent flyer status too Following the Sydney Olympics for example and the thousands of visitors to Australia it was estimated that the bed bug occupancy rate in Sydney hotels was 95% In Sleep Tight Brooke Borel introduces readers to the biology of these amazingly adaptive insects which can travel over 100 foot distances at night and the myriad ways in which humans respond to them She travels to meet with scientists who are rearing bed bug colonies on their own blood to the BedBug University to swank apartments on the upper East Side of Manhattan She explores the history of bed bugs and their near extinction charting how current infestations are in direct response to human chemical use She also introduces us to the economics of bed bug infestations and the industry that has arisen to combat that This is the first history and natural history of bed bugs and it leaves few exoskeletons unturned
