Networks Wichian Premchaiswadi, 2012-04-20 Bayesian Belief Networks are a powerful tool for combining different knowledge sources with various degrees of uncertainty in a mathematically sound and computationally efficient way A Bayesian network is a graphical model that encodes probabilistic relationships among variables of interest When used in conjunction with statistical techniques the graphical model has several advantages for data modeling First because the model encodes dependencies among all variables it readily handles situations where some data entries are missing Second a

Bayesian network can be used to learn causal relationships and hence can be used to gain an understanding about a problem domain and to predict the consequences of intervention Third because the model has both causal and probabilistic semantics it is an ideal representation for combining prior knowledge which often comes in a causal form and data Fourth Bayesian statistical methods in conjunction with Bayesian networks offer an efficient and principled approach to avoid the over fitting of data
