Of First Courses:

A First Course in Machine Learning Simon Rogers, Mark Girolami, 2016-10-14 A First Course in Machine Learning by Simon Rogers and Mark Girolami is the best introductory book for ML currently available. It combines rigor and precision with accessibility, starting from a detailed explanation of the basic foundations of Bayesian analysis in the simplest of settings and goes all the way to the frontiers of the subject such as infinite mixture models, GPs, and MCMC. Devdatt Dubhashi, Professor, Department of Computer Science and Engineering, Chalmers University, Sweden. This textbook manages to be easier to read than other comparable books in the subject while retaining all the rigorous treatment needed. The new chapters put it at the forefront of the field by covering topics that have become mainstream in machine learning over the last decade. Daniel Barbara George Mason, University of Fairfax, Virginia, USA. The new edition of A First Course in Machine Learning by Rogers and Girolami is an excellent introduction to the use of statistical methods in machine learning. The book introduces concepts such as mathematical modeling, inference, and prediction, providing just in time the essential background on linear algebra, calculus, and probability theory that the reader needs to understand these concepts. Daniel Ortiz Arroyo, Associate Professor, Aalborg University, Esbjerg, Denmark. I was impressed by how closely the material aligns with the needs of an introductory course on machine learning, which is its greatest strength. Overall, this is a pragmatic and helpful book which is well aligned to the needs of an introductory course and one that I will be looking at for my own students in coming months. David Clifton, University of Oxford, UK. The first edition of this book was already an excellent introductory text on machine learning for an advanced undergraduate or taught masters level course or indeed for anybody who wants to learn about an interesting and important field of computer science. The additional chapters of advanced material on Gaussian process, MCMC, and mixture modeling provide an ideal basis for practical projects without disturbing the very clear and readable exposition of the basics contained in the first part of the book. Gavin Cawley, Senior Lecturer, School of Computing Sciences, University of East Anglia, UK. This book could be used for junior senior undergraduate students or first year graduate students as well as individuals who want to explore the field of machine learning. The book introduces not only the concepts but the underlying ideas on algorithm implementation from a critical thinking perspective. Guangzhi Qu, Oakland University, Rochester, Michigan, USA.

A First Course in Information Theory Raymond W. Yeung, 2012-12-06 A First Course in Information Theory is an up to date introduction to information theory. In addition to the classical topics discussed, it provides the first comprehensive treatment of the theory of I-Measure, network coding theory, Shannon and non-Shannon type information inequalities, and a relation between entropy and group theory. ITIP, a software package for proving information inequalities, is also included. With a large number of examples, illustrations, and original problems, this book is excellent as a textbook or reference book for a senior or graduate level course on the subject as well as a reference for researchers in related fields.

Multivariate Statistics Bernard Flury, 2013-03-09 My goal in writing this book has been to provide teachers and students of multi variate statistics with a unified treatment of both theoretical and practical aspects of this fascinating area. The text is designed for a broad readership including advanced undergraduate students and graduate students in statistics, graduate students in biology, anthropology, life sciences and other areas, and postgraduate students. The style of this book reflects my belief that the common distinction between multivariate statistical theory and multivariate methods is artificial and should be abandoned. I hope that readers who are mostly interested in practical applications will find the theory accessible and interesting. Similarly, I hope to show to more mathematically interested students that multivariate statistical modelling is much more than applying formulas to data sets. The text covers mostly parametric models but gives brief introductions to computer intensive methods such as the bootstrap and randomization tests as well. The selection of material reflects my own preferences and views. My principle in writing this text has been to restrict the presentation to relatively few topics but cover these in detail. This should allow the student to study an area deeply enough to feel comfortable with it and to start reading more advanced books or articles on the same topic.

A First Course in Atmospheric Thermodynamics Grant W. Petty, 2008-01-01 This textbook is written for meteorology majors who require an initial introduction to the physical properties of the atmosphere and to the essential principles and real world applications of atmospheric thermodynamics. These topics are supplemented by a sampling of techniques and technologies related to atmospheric measurements and observations. A unique tutorial included as an appendix teaches students how to attack physical problems symbolically, deferring numerical calculations until the final step in the solution. The author's objectives include not only covering the traditional core subject matter of an undergraduate thermodynamics course but also facilitating students' transition from a purely abstract understanding of calculus and physics concepts to the confident application of both to the science of meteorology.

Undergraduate Curricular Peer Mentoring Programs Tania S. Smith, 2012-12-15 Curricular peer mentoring is a programmatic approach to enrich student learning and engagement in postsecondary courses in which instructors welcome a more experienced undergraduate student into a credit course they are teaching. The student then serves as peer mentor to the students enrolled. Peer mentors can provide a variety of peer appropriate course specific mentoring, tutoring, facilitation, and leadership roles and activities that complement the roles of the course's instructor and teaching assistants, both in classroom settings and beyond. A program provides training and ongoing support for a larger number of peer mentors and instructional teams and manages recruitment and program research and quality. This volume provides research findings, definitions, theories, and practical program descriptions as a foundation for program development and research of undergraduate curricular peer mentoring programs in higher education. This work builds on a long history of higher education program development and collects a significant amount of literature that has previously been scattered.

Calendar ... University College, Galway, 1899 First Course In The: Theory Of Equations Leonard Eugene Dickson, First Course in the Theory of Equations is an educational mathematics textbook that introduces students to the study of polynomial equations and their properties The book covers topics such as the roots of equations relationships between roots and coefficients symmetric functions factorization and methods for solving quadratic cubic and quartic equations along with the fundamental theorem of algebra Written with clarity and a focus on problem solving it provides worked examples and techniques to help beginners build a solid foundation in algebra serving as a stepping stone to more advanced studies in abstract algebra and higher mathematics Purpose Introduces students to the theory of polynomial equations and their solutions Key Topics Roots of polynomial equations Relationships between roots and coefficients Symmetric functions of roots Approach Emphasizes clear explanations worked examples and practical problem solving techniques Audience Undergraduate students or beginners studying algebra and the theory of equations Impact Provides a solid foundation for advanced algebra and higher mathematics studies A First Course in Harmonic Analysis Anton Deitmar, 2013-04-17 This book is intended as a primer in harmonic analysis at the undergraduate level All the central concepts of harmonic analysis are introduced without too much technical overload For example the book is based entirely on the Riemann integral instead of the more demanding Lebesgue integral Furthermore all topological questions are dealt with purely in the context of metric spaces It is quite surprising that this works Indeed it turns out that the central concepts theory can be explained using very little of this beautiful and useful technical background The first aim of this book is to give a lean introduction to Fourier analysis leading up to the Poisson summation formula The second aim is to make the reader aware of the fact that both principal incarnations of Fourier Theory the Fourier series and the Fourier transform are special cases of a more general theory arising in the context of locally compact abelian groups The third goal of this book is to introduce the reader to the techniques used in harmonic analysis of noncommutative groups These techniques are explained in the context of matrix groups as a principal example
