and Technology (U.S.), William Edgar Knowles Middleton, 1969      **Meteorological Measurements and Instrumentation**

R. Giles Harrison, 2015-01-20 This book describes the fundamental scientific principles underlying high quality instrumentation used for environmental measurements. It discusses a wide range of in situ sensors employed in practical environmental monitoring and in particular those used in surface based measurement systems. It also considers the use of weather balloons to provide a wealth of upper atmosphere data. To illustrate the technologies in use it includes many examples of real atmospheric measurements in typical and unusual circumstances with a discussion of the electronic signal conditioning, data acquisition considerations and data processing principles necessary for reliable measurements. This also allows the long history of atmospheric measurements to be placed in the context of the requirements of modern climate science by building the physical science appreciation of the instrumental record and looking forward to new and emerging sensor and recording technologies.

*The 18th Century Climate of Jamaica Derived from the Journals of Thomas Thistlewood, 1750-1786* Michael Chenoweth, 2003 Thomas Thistlewood is known for his daily records of life on a slave plantation in eighteenth century Jamaica. Thistlewood's previously unexamined weather journal is shown here to be the most important written record from the Earth's tropical regions available. His observation methods are superior to most of his contemporaries; provide a high quality daily record of more than 35 years. Comparison of his records with modern weather records indicates that Thistlewood's Jamaica was a much cooler, moister place than in modern times. A 252 year record of tropical storm/hurricane frequency in Jamaica reveals that the late 20th century minimum in storm frequency is unprecedented.
