The Ecology and Evolution of Ant-Plant Interactions Victor Rico-Gray, Paulo S. Oliveira, 2008-09-15. Ants are probably the most dominant insect group on Earth representing ten to fifteen percent of animal biomass in terrestrial ecosystems. Flowering plants meanwhile owe their evolutionary success to an array of interspecific interactions such as pollination, seed dispersal, and herbivory that have helped to shape their great diversity. *The Ecology and Evolution of Ant-Plant Interactions* brings together findings from the scientific literature on the coevolution of ants and plants to provide a better understanding of the unparalleled success of these two remarkable groups of interspecific interactions in general and ultimately of terrestrial biological communities. *The Ecology and Evolution of Ant-Plant Interactions* synthesizes the dynamics of ant-plant interactions including the sources of variation in their outcomes. Victor Rico-Gray and Paulo S. Oliveira capture both the emerging appreciation of the importance of these interactions within ecosystems and the developing approaches that place studies of these interactions into a broader ecological and evolutionary context. The collaboration of two internationally renowned scientists, *The Ecology and Evolution of Ant-Plant Interactions* will become a standard reference for understanding the complex interactions between these two taxa.

What Animals Teach Us About Families Beth A. Berkowitz, 2026-01-06. Reading the Bible and rabbinic literature to reimagine the bonds between animals. Moving beyond debates about the ethics of animal consumption to focus on animals' intimate lives. Beth A. Berkowitz examines the contribution of religious traditions and sacred texts to contemporary conversations about animals. Reading the four animal family laws of the Bible alongside their rabbinic interpretations from ancient times to today, she examines the bonds that animals form with each other and reimagines family to include new forms of life and alternative modes of kinship. Humanitarian politics and biblical law tend to take for granted that human interests supersede animal interests and that our moral obligation extends only to avoiding unnecessary suffering, but necessity is determined by humans. *What Animals Teach Us About Families* looks at animal emotions, animal agency, family diversity, and human response to reconsider the obligations and opportunities the animal family presents.
