All-Optical Communication Systems, 1995 All-optical Communication Systems: Architecture, Control, and Network Issues, 1997 *All-optical Communication Systems: Architecture, Control, and Network Issues II* Robert A. Cryan, John M. Senior, 1996 All-optical Communication Systems John M. Senior, Robert A. Cryan, Chunming Qiao, 1997 **Photonic Slot Routing in Optical Transport Networks** Gosse Wedzinga, 2012-12-06

All optical networking is generally believed to be the only solution for coping with the ever increasing demands in bandwidth such as the World Wide Web application. Optical backbone networks efficiently achieve a high level of traffic aggregation by multiplexing numerous users on circuit switched wavelength paths. The so called wavelength routing approach. In contrast the reduced level of traffic aggregation in access and metro networks makes wavelength routing solutions not adequate. In these network areas packet interleaved optical time division multiplexing with its finer and more dynamic bandwidth allocation is advocated. The book presents such an approach known as photonic slot routing. It illustrates how this approach may provide a cost effective solution to deploying all optical transport networks using today's optical device technology. To that end the author combines DWDM technology with fixed slot optical switching and gives a comprehensive description of this approach in which slots are aligned across the wavelengths to form groups of data flows that propagate as a whole inside the network. Operating algorithms are developed and network performance is analyzed both by means of theoretical analysis and many simulations of sample networks. This work will be of particular interest to researchers and professionals who are active in photonic networking.

Computational Science and Its Applications - ICCSA 2008 Osvaldo Gervasi, Beniamino Murgante, Antonio Laganà, David Taniar, Youngsong Mun, 2008-06-28. This two volume set is assembled following the 2008 International Conference on Computational Science and Its Applications ICCSA 2008, a premium international event held in Perugia, Italy, from June 30 to July 3, 2008. The collection of fully refereed high quality original works accepted as theme papers for presentation at ICCSA 2008 are published in this LNCS proceedings set. This outstanding collection complements the volume of workshop papers traditionally published by IEEE Computer Society. The continuous support of computational science researchers has helped ICCSA to become a firmly established forum in the area of scientific computing and the conference itself has become a recurring scientific and professional meeting that cannot be given up. The computational science field based on fundamental disciplines such as mathematics, physics and chemistry is finding new computational approaches to foster human progress in heterogeneous and fundamental areas such as aerospace and automotive industries, bioinformatics and nanotechnology, studies networks and grid computing, computational geometry and biometrics, computer education, virtual reality and art. Due to the growing complexity of many challenges in computational science, the use of sophisticated algorithms and emerging technologies is inevitable. Together these far reaching scientific areas help to shape this conference in the areas of state of the art computational science research and applications encompassing the facilitating theoretical foundations and the innovative
