Recent Advances in Fish Farms Faruk Aral, Zafer Dogu, 2011-11-21. The world keeps changing. There are always risks associated with change. To make careful risk assessment, it is always needed to re-evaluate the information according to new findings in research. Scientific knowledge is essential in determining the strategy for fish farming. This information should be updated and brought into line with the required conditions of the farm. Therefore, books are one of the indispensable tools for following the results in research and sources to draw information from. The chapters in this book include photos and figures based on scientific literature. Each section is labeled with references for readers to understand figures, tables, and text. Another advantage of the book is the systematic writing style of each chapter. There are several existing scientific volumes that focus specially on fish farms. The book consists of twelve distinct chapters. A wide variety of scientists, researchers, and others will benefit from this book.
