The Statistical Analysis of Categorical Data Erling B. Andersen, 2012-12-06 The aim of this book is to give an up to date account of the most commonly uses statisti cal models for categorical data The emphasis is on the connection between theory and applications to real data sets The book only covers models for categorical data Various models for mixed continuous and categorical data are

thus excluded The book is written as a textbook although many methods and results are quite recent This should imply that the book can be used for a graduate course in categorical data analysis With this aim in mind chapters 3 to 12 are concluded with a set of exercises In many cases the data sets are those data sets which were not included in the examples of the book although they at one point in time were regarded as potential candidates for an example A certain amount of general knowledge of statistical theory is necessary to fully benefit from the book A summary of the basic statistical concepts deemed necessary prerequisites is given in chapter 2 The mathematical level is only moderately high but the account in chapter 3 of basic properties of exponential families and the parametric multinomial distribution is made as mathematically precise as possible without going into mathematical details and leaving out most proofs

Statistical Methods in Longitudinal Research Alexander von Eye, 2014-06-28 These edited volumes present new statistical methods in a way that bridges the gap between theoretical and applied statistics The volumes cover general problems and issues and more specific topics concerning the structuring of change the analysis of time series and the analysis of categorical longitudinal data The book targets students of development and change in a variety of fields psychology sociology anthropology education medicine psychiatry economics behavioural sciences developmental psychology ecology plant physiology and biometry with basic training in statistics and computing
