

Amphetamines

- Amphetamines belong to a group of drugs called stimulants. Amphetamines speed up the messages going between the brain and the body. Some types of amphetamines are legally prescribed by doctors to treat conditions such as attention deficit hyperactivity disorder (ADHD) and narcolepsy (where a person has an uncontrollable urge to sleep). Some people use amphetamines illegally to become intoxicated. Amphetamines are sometimes produced in backyard laboratories and mixed with other substances that can have unpleasant or harmful effects.
- Common names for amphetamines are speed, fast, up, uppers, louie, goey and whiz.
