Managing Biodiversity in Agricultural Ecosystems Devra Ivy Jarvis, Christine Padoch, H. David Cooper, 2007
Describes how farmers manage maintain and benefit from biodiversity in agricultural production systems Includes the most recent research and developments in the maintenance of local diversity at the genetic species and ecosystem levels

Agriculture, Biodiversity and Markets Stewart Lockie, David Carpenter, 2010 Debate about how best to ensure the preservation of agricultural biodiversity is caught in a counter productive polemic between proponents and critics of market based instruments and agricultural modernization However it is argued in this book that neither position does justice to the range of strategies that farmers use to manage agrobiodiversity and other livelihood assets as they adapt to changing social economic and environmental circumstances

Ecological Engineering for Pest Management Geoff M Gurr, Steve D Wratten, Miguel A Altieri, 2004-08-03 Ecological engineering is about manipulating farm habitats making them less favourable for pests and more attractive to beneficial insects Though they have received far less research attention and funding ecological approaches may be safer and more sustainable than their controversial cousin genetic engineering This book brings together contributions from international workers leading the fast moving field of habitat manipulation reviewing the field and paving the way towards the development and application of new pest management approaches Chapters explore the frontiers of ecological engineering methods including molecular approaches high tech marking and remote sensing They also

review the theoretical aspects of this field and how ecological engineering may interact with genetic engineering The technologies presented offer opportunities to reduce crop losses to insects while reducing the use of pesticides and providing potentially valuable habitat for wildlife conservation With contributions from the USA UK Germany Switzerland Australia New Zealand Kenya and Israel this book provides comprehensive coverage of international progress towards sustainable pest management

Weed Biology and Management Inderjit,2013-11-11 Weeds hold an enigmatic and sometimes controversial place in agriculture where they are generally reviled grudgingly tolerated and occasionally admired In most cases growers make considerable effort to reduce the negative economic impact of weeds because they compete with crops for resources and hinder field operations thereby affecting crop productivity and quality and ultimately the sustainability of agriculture Weed control in production agriculture is commonly achieved through the integration of chemical biological and mechanical management methods Chemicals herbicides usually inhibit the growth and establishment of weed plants by interfering with various physiological and biochemical pathways Biological methods include crop competition smother crops rotation crops and allelopathy as well as specific insect predators and plant pathogens Mechanical methods encompass an array of tools from short handled hoes to sophisticated video guided robotic machines Integrating these technologies in order to relieve the negative impacts of weeds on crop production in a way that allows growers to optimize profits and preserve human health and the environment is the science of weed management
