the important characteristics of each bird The concise text provides vital information and an index of common names is provided at the back of the book

Logging for the Ark Lena Gustafsson, 2007 In order to maintain the high levels of biodiversity and the ecological functions of tropical forest landscapes in South East Asia production forests need to be managed in a more sustainable way Numerous initiatives already exist in the form of codes of practice criteria and indicators and certification schemes in the countries of South East Asia but to date such guidelines and standards have been vague and have lacked quantitative targets Reduced impact logging RIL is a concept related to techniques and practices that aim to achieve environmentally sound timber harvesting the concept has gained broad acceptance in the tropics As yet however RIL guidelines have focused mainly on environmental aspects such as soil and water and have taken the flora and fauna into account to a minor degree only In this report detailed recommendations are made to help forest managers take account of biodiversity conservation in dipterocarp logged over and primary natural forests where mechanized logging is practiced The recommendations are based on those made in the CIFOR publication *Life after Logging* further developed through three workshops held under a joint project between the Swedish University of Agricultural Sciences CIFOR and the Forest Science Institute of Vietnam The recommendations are linked to the different phases of the forestry cycle i.e. planning inventories of sensitive species and habitats delimitation of set aside areas and riparian buffers infrastructure logging camps roads bridges skid trails landings logging retention of critical structures micro habitats key resources felling techniques harvesting intensity site adaption post logging understory slashing rehabilitation of log landings and stream crossings reforestation and monitoring biodiversity inventories Issues related to hunting fire invasive species domestic animals traffic and logging and conservation for local people are also covered

Mining Environmental Policy Michael S. Hamilton, 2017-11-30 Illustrated by a detailed comparative examination of mining regulations and environmental impact assessment EIA in the USA the second largest producer of coal in the world and Indonesia the eighth largest and most rapidly growing this book argues that the degree of policy integration often determines the success or failure in controlling environmental effects of mining operations Comparison of surface mining regulation in the two countries provides some stark contrasts some surprising results concerning the diffusion of policy innovations from one country to another and instances of both policy success and failure The book provides significant new insights into international relations and comparative environmental policy particularly as they affect rainforests and biodiversity It also suggests that if mining environmental policy were to be effectively implemented the environmental degradation caused need not be permanent

Tourism and National Parks Warwick Frost, C. Michael Hall, 2012-08-21 In 1872 Yellowstone was established as a National Park The name caught the public's imagination and by the close of the century other National Parks had been declared not only in the USA but also in Australia Canada and New Zealand Yet as it has spread the concept has evolved and diversified In the absence of any international controlling body individual countries have been free to adapt the concept for their own physical social and

economic environments Some have established national parks to protect scenery others to protect ecosystems or wildlife Tourism has also been a fundamental component of the national parks concept from the beginning and predates ecological justifications for national park establishment though it has been closely related to landscape conservation rationales at the outset Approaches to tourism and visitor management have varied Some have stripped their parks of signs of human settlement while increasingly others are blending natural and cultural heritage and reflecting national identities This edited volume explores in detail the origins and multiple meanings of National Parks and their relationship to tourism in a variety of national contexts It consists of a series of introductory overview chapters followed by case study chapters from around the world including insights from the US Canada Australia UK Spain France Sweden Indonesia China and Southern Africa Taking a global comparative approach this book examines how and why national parks have spread and evolved how they have been fashioned and used and the integral role of tourism within national parks The volume s focus on the long standing connection between tourism and national parks and the changing concept of national parks over time and space give the book a distinct niche in the national parks and tourism literature The volume is expected to contribute not only to tourism and national park studies at the upper level undergraduate and graduate levels but also to courses in international and comparative environmental history conservation studies and outdoor recreation management
