Biological Diversity and Classification

Taxonomy is that branch of biology dealing with the identification and naming of organisms. The ancient Greek philosopher Aristotle apparently began the discussion on taxonomy. British naturalist John Ray is credited with revising the concept of naming and describing organisms. During the 1700s, Swedish botanist Carolus Linneus classified all then-known organisms into two large groups: the kingdoms Plantae and Animalia. Robert Whittaker in 1969 proposed five kingdoms: Plantae, Animalia, Fungi, Protista, and Monera. Other schemes involving an even greater number of kingdoms have lately been proposed, however most biologists employ Whittaker's five kingdoms. Recent studies suggest that three domains be employed: Archaea, Bacteria, and Eukarya. The classification of a rose is shown in Figure 1, while that of a warbler is illustrated in Figure 2.

Figure 1. Taxonomy of a selected plant species. Note the increasing inclusivity of the "higher" taxonomic ranks. Kingdoms have a great deal more types of creatures in them than do species.
