Introduction to the Chemistry of Food Michael Zeece, 2020-01-30

Introduction to the Chemistry of Food describes the molecular composition of food and the chemistry of its components. It provides students with an understanding of chemical and biochemical reactions that impact food quality and contribute to wellness. This innovative approach enables students in food science, nutrition, and culinology to better understand the role of chemistry in food. Specifically, the text provides background in food composition, demonstrates how chemistry impacts quality, and highlights its role in creating novel foods. Each chapter contains a review section with suggested learning activities. Text and supplemental materials can be used in traditional face-to-face, distance, or blended learning formats. Describes the major and minor components of food. Explains the functional properties contributed by proteins, carbohydrates, and lipids in food. Explores the chemical and enzymatic reactions affecting food attributes: color, flavor, and nutritional quality. Describes the gut microbiome and influence of food components on its microbial population. Reviews major food systems and novel sources of food protein.
