B Lymphocytes Function And Regulation:

B Lymphocytes Paolo Del Guercio,1989-01-01 Essential Oncology of the Lymphocyte Ian J. Forbes,Anthony S.-Y. Leong,2012-12-06 This book has been written from two points of view firstly from the viewpoint of those who are involved in the diagnosis and treatment of lymphoid malignancies who must meet the challenge of integrating the new biological insights into their knowledge of these diseases and secondly from the viewpoint of those who are involved in basic biological approaches to malignancy and immunology who wish to know more about the function of the lymphoid tissues and their malignant diseases Neoplasia of lymphocytes is a focus for considering many of the most important biological advances impinging on cancer in the past two or three decades because malignant lymphoproliferative diseases offer unequalled opportunities for studying many aspects of cancer We probably know more about lymphocytes than other normal cells because of the ease with which they can be obtained For the same reason we probably know more about malignant lymphocytes One or other aspect of most of the momentous advances in biology of the past two or three decades has implications for lymphoid malignancies hybridoma technology and the use of monoclonal antibodies gene technology the understanding of oncogenes and growth factors in the control of growth and differentiation insights into causation of cancer by potent tumour promoters such as the phorbol esters and by viruses and knowledge of the control of growth function of lymphocytes themselves Conversely many of the advances in understanding lymphocytic leukaemias and lymphomas have implications for other cancers **Biomedical Index to PHS-supported Research: pt. Schamel,2022-01-04 **Lipid Signaling in T Cell Development and Function** Karsten Sauer,Klaus Okkenhaug,2015-11-12 Lipids are best known as energy storing molecules and core components of cellular membranes but can also act as mediators of cellular signaling This is most prominently illustrated by the paramount importance of the phospholipase C PLC and phosphoinositide 3 kinase PI3K signaling pathways in many cells including T cells and cancer cells

Both of these enzymes use the lipid phosphatidylinositol 4 5 bisphosphate PIP2 as their substrate PLCs produce the lipid product diacylglycerol DAG and soluble inositol 1 4 5 trisphosphate IP3 DAG acts as a membrane tether for protein kinase C and RasGRP proteins IP3 is released into the cytosol and controls calcium release from internal stores The PI3K lipid product phosphatidylinositol 3 4 5 trisphosphate PIP3 controls signaling by binding and recruiting effector proteins such as Akt and Itk to cellular membranes Recent research has unveiled important signaling roles for many additional phosphoinositides and other lipids The articles in this volume highlight how multiple different lipids govern T cell development and function through diverse mechanisms and effectors In T cells lipids can orchestrate signaling by organizing membrane topology in rafts or microdomains direct protein function through covalent lipid modification or non covalent lipid binding act as intracellular or extracellular messenger molecules or govern T cell function at the level of metabolic regulation The cellular activity of certain lipid messengers is moreover controlled by soluble counterparts exemplified by symmetric PIP3 inositol 1 3 4 5 tetrakisphosphate IP4 signaling in developing T cells Not surprisingly lipid producing and metabolizing enzymes have gained attention as potential therapeutic targets for immune disorders leukemias and lymphomas
