Aw Landscapes Pb:

Amazonia: Landscape and Species Evolution Carina Hoorn, Frank Wesselingh, 2011-09-26 The book focuses on geological history as the critical factor in determining the present biodiversity and landscapes of Amazonia The different driving mechanisms for landscape evolution are explored by reviewing the history of the Amazonian Craton the associated sedimentary basins and the role of mountain uplift and climate change This book provides an insight into the Meso and Cenozoic record of Amazonia that was characterized by fluvial and long lived lake systems and a highly diverse flora and fauna This fauna includes giants such as the ca 12 m long caiman *Purussaurus* but also a varied fish fauna and fragile molluscs whilst fossil pollen and spores form relics of ancestral swamps and rainforests Finally a review the molecular datasets of the modern Amazonian rainforest and aquatic ecosystem discussing the possible relations between the origin of Amazonian species diversity and the palaeogeographic palaeoclimatic and palaeoenvironmental evolution of northern South America The multidisciplinary approach in evaluating the history of Amazonia has resulted in a comprehensive volume that provides novel insights into the evolution of this region Emulating Natural Forest Landscape Disturbances Ajith H. Perera, Lisa Buse, Michael G. Weber, 2004 This comprehensive collection of provocative papers provides a scientific foundation for justifying the use of and a solid framework for examining the ambiguities inherent in emulating natural forest landscape disturbance Contributors range from policymakers and forestry professionals to academics and conservationists offering a balanced view of the promises and challenges of the forest management paradigm in sustaining forest landscapes The book opens with an overview of foundational concepts a detailed discussion of emerging forest management paradigms and their global context and an examination of the ecological premise for emulating natural disturbance This section also explores the current understanding of natural disturbance regimes including the two most prevalent in North America fire and insects The volume then uses several geographically diverse case studies to address the characterization of natural disturbances and the development of applied templates for their emulation through forest management The emphasis on fire regimes reflects the greater focus that has traditionally been placed on understanding and managing fire compared with other forms of disturbance and utilizes several viewpoints to address the lessons learned from historical disturbance patterns Reflecting current developments in the field immediate challenges and potential directions this collection concludes with a penetrating look at practical applications exploring the expectations for and feasibility of emulating natural disturbance through forest management **Abia South and Southeast Asian Art and Archaeology Index** Karel R. Van Kooij, 2018-10-24 This volume is the first tangible result of an international project initiated by the International Institute for Asian Studies IIAS with the aim of compiling a bibliographic database documenting publications on South and Southeast Asian art and archaeology The bibliographic information over 1 300 records extracted from the database forms the principal part of this publication It is preceded by a list of periodicals consulted and followed by three types of indexes which help

users to find their way in the ABIA South and Southeast Asian Art and Archaeology Index ABIA Index The detailed bibliographic descriptions controlled keywords and many elucidating annotations make this reference work into an indispensable guide to recent scholarly work on the prehistory and arts of South Southeast Asia *Integrating Landscape Ecology Into Natural Resource Management* Jianguo Liu, William W. Taylor, 2002-08 The rapidly increasing global population has dramatically increased the demands for natural resources and has caused significant changes in quantity and quality of natural resources To achieve sustainable resource management it is essential to obtain insightful guidance from emerging disciplines such as landscape ecology This text addresses the links between landscape ecology and natural resource management These links are discussed in the context of various landscape types a diverse set of resources and a wide range of management issues A large number of landscape ecology concepts principles and methods are introduced Critical reviews of past management practices and a number of case studies are presented This text provides many guidelines for managing natural resources from a landscape perspective and offers useful suggestions for landscape ecologists to carry out research relevant to natural resource management In addition it will be an ideal supplemental text for graduate and advanced undergraduate ecology courses **Riparian Landscapes** George Patrick Malanson, 1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography

Environmental Risk Assessment and Management from a Landscape Perspective Lawrence A. Kapustka, Wayne G. Landis, 2010-07-15 An important guide to assessing and managing the environment from a landscape perspective Ecological relationships are nested within the landscape Identifying the relevant spatial and temporal scales is critical for an effective understanding of ecological functions that human societies depend upon Moreover human encroachment into natural areas or changes in climate can alter spatial relationships which in turn can negatively affect vital plant and wildlife patterns and weaken economic structures needed to sustain human societies This book is the first to combine multiple disciplines into one cohesive strategy to study these crucial connections and looks toward building a social paradigm that embraces the dynamics of ecological systems This book Integrates landscape ecology environmental risk assessment valuation of ecological goods and services and environmental management decision processes into one single source Includes chapters on quantitative

measures Bayesian modeling economic analysis and sustainable landscapes Covers marine forest agricultural and pharmaceutical risk assessment Has a chapter on predicting climate change risk to ecosystems Has a companion ftp site with color graphics animations and risk assessment tools With material that is accessible across all knowledge levels

Environmental Risk Assessment and Management from a Landscape Perspective moves beyond looking solely at chemical contaminants to diagnose environmental threats and aims to accomplish practical risk assessment in a manner that supports long term sustainable management

Melancholy and the Landscape Jacky Bowring, 2016-07-07 Written as an advocacy of melancholy's value as part of landscape experience this book situates the concept within landscape's aesthetic traditions and reveals how it is a critical part of ethics and empathy With a history that extends back to ancient times melancholy has hovered at the edges of the appreciation of landscape including the aesthetic exertions of the eighteenth century Implicated in the more formal categories of the Sublime and the Picturesque melancholy captures the subtle condition of beautiful sadness The book proposes a range of conditions which are conducive to melancholy and presents examples from each including The Void The Uncanny Silence Shadows and Darkness Aura Liminality Fragments Leavings Submersion Weathering and Patina

Landscape, Process and Power Serena Heckler, 2012 In recent years the field of study variously called local indigenous or traditional environmental knowledge TEK has experienced a crisis brought about by the questioning of some of its basic assumptions This has included reassessing notions that scientific methods can accurately elicit and describe TEK or that incorporating it into development projects will improve the physical social or economic well being of marginalized peoples The contributors to this volume argue that to accurately and appropriately describe TEK the historical and political forces that have shaped it as well as people's day to day engagement with the landscape around them must be taken into account TEK thus emerges not as an easily translatable tool for development experts but as a rich and complex element of contemporary lives that should be defined and managed by indigenous and local peoples themselves
