Adaptive Spatial Alignment Gordon M. Redding, Benjamin Wallace, 2013-06-17 For most people prism adaptation is an amusing demonstration first experienced perhaps in an introductory psychology course This monograph relates this peculiar phenomenon to the larger context of cognitive science especially motor control and learning The first part sketches the background concepts necessary to understand the contribution of prism adaptation to the larger issue of adaptive perceptual motor performance including a review of the basic concepts of motor control and learning that enable strategic response in the prism adaptation situation the development of a hypothesis about spatial representation and spatial mapping and an introduction to the basic idea of adaptive spatial alignment and a contrasting view of perceptual and motor learning and a review of evidence for the involvement of nonassociative and associative learning in prism adaptation Directly concerned with data and theory in prism adaptation the second part presents an outline of prism adaptation methodology and a list of several empirical conclusions from previous research that constrained development of theoretical framework a theory of strategic perceptual motor control and learning which enables adaptive performance during prism exposure but does not directly involve adaptive spatial alignment an extension of the theory to include realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework The last part of this volume reviews the research conducted in developing and testing the present theory of prism adaptation It summarizes the initial investigations employing a naturalistic exposure setting reports some more rigorous tests with an experimentally constrained research paradigm points out the more general theoretical issues raised by the authors analysis of prism adaptation and makes specific suggestions for further research within the prism adaptation paradigm

realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework. The last part of this volume reviews the research conducted in developing and testing the present theory of prism adaptation. It summarizes the initial investigations employing a naturalistic exposure setting, reports some more rigorous tests with an experimentally constrained research paradigm, points out the more general theoretical issues raised by the authors' analysis of prism adaptation, and makes specific suggestions for further research within the prism adaptation paradigm.

Plasticity in Sensory Systems Jennifer K. E. Steeves, Laurence R. Harris, 2013. Plasticity is a fundamental property of neural development and learning in living organisms. It also contributes to problems associated with aging and degenerative processes. Understanding neural plasticity has huge implications for those seeking to recover from brain injury or sensory deprivation and regular folk vying to improve their skills and ability. Centered on three themes, this book explores the latest research in plasticity in sensory systems with a focus primarily on visual and auditory systems. It covers a breadth of recent scientific study within the field, including research on healthy systems and diseased models of sensory processing. Topics include visual and visuomotor learning, models of how the brain codes visual information, sensory adaptations in vision and hearing as a result of partial or complete visual loss in childhood, plasticity in the adult visual system, and plasticity across the senses as well as new techniques in vision recovery, rehabilitation, and sensory substitution of other senses when one sense is lost. This unique edited volume, the fruit of an International Conference on Plastic Vision held at York University, Toronto, will provide students and scientists with an overview of the ongoing research related to sensory plasticity and perspectives on the direction of future work in the field.

Vision and Motor Control L. Proteau, D. Elliott, 1992-02-20. Since the classic studies of Woodworth (1899), the role of vision in the control of movement has been an important research topic in experimental psychology. While many early studies were concerned with the relative importance of vision and kinesthesia and/or the time it takes to use visual information, recent theoretical and technical developments have stimulated scientists to ask questions about how different sources of visual information contribute to motor control in different contexts. In this volume, articles are presented that provide a broad coverage of the current research and theory on vision and human motor learning and control. Many of the contributors are colleagues that have met over the years at the meetings and conferences concerned with human movement. They represent a wide range of affiliation and background, including kinesiology, physical education, neurophysiology, cognitive psychology, and neuropsychology. Thus, the topic of vision and motor control is addressed from a number of different perspectives. In general, each author sets an empirical and theoretical framework for their topic and then discusses current work from their own laboratory and how it fits into the larger context. A synthesis chapter at the end of the volume identifies commonalities in the work and suggests directions for future experimentation.

Spatial Processing in Navigation, Imagery and Perception Fred W. Mast, Lutz Jäncke, 2007-06-13 Spatial Processing in Navigation Imagery and Perception Since the decade of the brain cognitive processes have found their way to the study of brain functions and an increasing number of research studies are dealing with the aspect of spatial processing In fact a tremendous part of the cognitive domains studied pertain to spatial processing However there is also a growing tendency for diversification in relation to the subprocesses underlying spatial processing Not only are there studies looking at the well known place cells in rats rabbits and other animals there is also an increasing number of studies looking at related topics in humans and monkeys such as spatial orientation spatial construction and spatial imagery These studies although diverse at first glance have many aspects in common We are now on the root to understand the underlying neuroanatomy and neurophysiology much better than ever before This is made possible by the advent of novel techniques such as structural and functional in vivo anatomy modeling and several sophisticated behavioral research tools such as virtual reality techniques and simulators Spatial processing is fundamental for understanding human cognition However compared to other domains such as memory language and attention the exploration of spatial functions has been understudied in the past years

The ventricular-subventricular zone: a source of oligodendrocytes in the adult brain Oscar Gonzalez-Perez,Jose Manuel Garcia-Verdugo,Adan Aguirre,2014-09-30

Demyelinating diseases are characterized by an extensive loss of oligodendrocytes and myelin sheaths from axolemma which commonly result in disability in young adults To date there is no effective treatment against these neurological disorders In the adult brain there are neural stem cells NSCs that reside within a niche denominated ventricular subventricular zone V SVZ in the lateral wall of the cerebral ventricles NSCs give rise to neurons and oligodendrocytes that help preserve cellular homeostasis Growing evidence indicates that V SVZ progenitor cells may represent an endogenous source of oligodendrocytes that can be useful to treat demyelinating diseases This e Book The ventricular subventricular zone as a source of oligodendrocytes in the adult brain collected the most recent evidence regarding the mechanisms that modulate the proliferation migration quiescence cell fate choices and survival of oligodendrocyte precursors generated in the V SVZ Herein we compiled information about the role of Sonic hedgehog NMDA receptors ErbB proteins hemopressin erythropoietin osmolarity and microglia in the oligodendrocyte production Some chapters also describe the role of oligodendrocyte precursors in the preservation of cellular homeostasis aging and white matter repair All these information is presented as novel research findings short communications and review articles which were written by experts in the field of oligodendrocyte generation myelin production and white matter re myelination
