

FOOD ADDITIVES GUIDE

Indeed it's worth examining all the ingredients listed in the food label especially for those who are concerned about, perchance they can help others to check out what we have been putting in our mouths and for our family and friends.

Quick Reference Guide

Name of the Ingredients	Brief Description	Halal Status/Comments
Gelatin	Usually of animal origin, mostly from hog skin and also from cattle.	• Can be consumed if they are from halal dhabiha animal.
Lard/Lard Shortening	Fat/purified fat from swine.	• Haram
Animal Shortening	Fats and oils of animal origin	• Halal if from Dhabiha animal only
Vegetable shortening	Fat and oils of plant origin	• Make sure the word "Pure" or 100% is there. • Sometimes animal fats are added to it at 5-15%.
Rennet or listed as enzyme	Protein breaking enzymes used in cheese making	• Halal if it is not from animal source.
Lecithin	Emulsifier of fat	• The sources are mainly from soybean and egg yolk.
Glycerine	For maintaining moistness of food	• Questionable – should ask the company about the source
Glycerol monostearate	Moistness, emulsifier	• Questionable
Gum tragacant	Thickener, binder and stabiliser	• Questionable

Additives Guide:

Essential Guide to Food Additives Mike Saltmarsh, 2019-08-01 Food additives have played and still play an essential role in the food industry. Additives span a great range from simple materials like sodium bicarbonate essential in the kitchen for making cakes to mono and diglycerides of fatty acids an essential emulsifier in low fat spreads and in bread. It has been popular to criticise food additives and in so doing to lump them all together but this approach ignores their diversity of history, source and use. This book includes food additives and why they are used, safety of food additives in Europe, additive legislation within the EU and outside Europe and the complete listing of all additives permitted in the EU. The law covering food additives in the EU which was first harmonised in 1989 has been amended frequently since then but has now been consolidated with the publication of Regulations 1331/2008 and 1129/2011. This 4th edition of the Guide brings it up to date with the changes introduced by this legislation and by the ongoing review of additives by EFSA. Providing an invaluable resource for food and drink manufacturers, this book is the only work covering in detail every additive, its sources and uses. Those working in and around the food industry, students of food science and indeed anyone with an interest in what is added to their food will find this a practical book full of fascinating details.

Essential Guide to Food Additives Leatherhead Food International, 2008-02-19 Food additives are the cause of a great deal of discussion and suspicion. Now in its third edition, *Essential Guide to Food Additives* aims to inform this debate and bring the literature right up to date, especially focussing on the changes in legislation since the last edition. Key topics include: A basic introduction to the technology of food additives; Technical information on all food additives currently permitted in the European Union; Discussion covering the general issues surrounding the use of food additives including the need for them; Coverage of the legal approval process for additives and the labelling of the finished product; Identification of sources or methods of production for each additive; Properties of individual additives and typical products they are used in. This book will be an invaluable reference for researchers in the food and drink industry, undergraduates and graduates of courses in food science and technology and indeed all those who are interested in what they eat.

Saltmarsh's Essential Guide to Food Additives Mike Saltmarsh, 2020-10-30 Food additives play a vital role in allowing food manufacturers to provide the range of foods that are available in the developed countries of the world. Additives cover a considerable range from the recognisable sodium bicarbonate used to make cakes in the domestic kitchen to mono and di acetyltartaric esters of mono and diglycerides of fatty acids used as emulsifiers in commercial bread production. They include curcumin the yellow colour in turmeric, beeswax and citric acid the acid in citrus fruit as well as substances prepared synthetically. It has long been fashionable in the media to criticise additives and in so doing to lump them all together but this ignores their diversity, their vital role in food production and preservation and the extensive testing they have undergone before being approved. This book outlines why additives are used, the testing regime within Europe and a complete listing of all additives permitted within the EU. The law covering food

additives in the EU which was harmonised in 1989 has been revised a number of times most recently by the publication of Regulations 1333 2008 and 1129 2011 These Regulations have been amended a number of times with additives being removed or added This fifth edition of the Guide brings it up to date with a revision of every chapter to reflect the current situation Providing an invaluable resource for food and drink manufacturers this book is the only work covering in detail every additive its sources and uses Those working in and around the food industry students of food science and indeed anyone with an interest in what is in their food will find this a practical book full of fascinating details
