Coating Materials for Electronic Applications James J. Licari,2003-06-11 This first book in the Materials and Processes for Electronics Applications series answers questions vital to the successful design and manufacturing of electronic components modules and systems such as How can one protect electronic assemblies from prolonged high humidity high temperatures salt spray or other terrestrial and space environments What coating types can be used to protect microelectronics in military space automotive or medical environments How can the chemistry of polymers be correlated to desirable physical and electrical properties How can a design engineer avoid subsequent potential failures due to corrosion metal migration electrical degradation outgassing What are the best processes that manufacturing can use to mask clean prepare the surface dispense the coating and cure the coating What quality assurance and in process tests can be used to assure reliability What government or industry specifications are available How can organic coatings be selected to meet OSHA EPA and other regulations Besides a discussion of the traditional roles of coatings for moisture and environmental protection of printed

circuit assemblies this book covers dielectric coatings that provide electrical functions such as the low dielectric constant dielectrics used to fabricate multilayer interconnect substrates and high frequency high speed circuits Materials engineers and chemists will benefit greatly from a chapter on the chemistry and properties of the main types of polymer coatings including Epoxies Polyimides Silicones Polyurethanes Parylene Benzocyclobenzene and many others For manufacturing personnel there is an entire chapter of over a dozen processes for masking cleaning and surface preparation and a comprehensive review of over 20 processes for the application and curing of coatings including recent extrusion meniscus and curtain coating methods used in processing large panels The pros and cons of each method are given to aid the engineer in selecting the optimum method for his her application As a bonus from his own experience the author discusses some caveats that will help reduce costs and avoid failures Finally the author discusses regulations of OSHA EPA and other government agencies which have resulted in formulation changes to meet VOC and toxicity requirements Tables of numerous military commercial industry and NASA specifications are given to help the engineer select the proper callout

High-Performance Polymer... Guy Rabilloud, Adhesives, Sealants, and Coatings for Space and Harsh Environments Lieng-Huang Lee, 2013-03-13 New technologies constantly generate new demands for exotic materials to be used in severe environments The rapid developments of aerospace industries during the last two decades have required new materials to survive extreme high and low temperatures and various radiations The exploration of new energy sources e g solar and geothermal has led us to develop new solar collectors and geothermal devices Even the search for new oils has demanded that we study the corrosive environment of oil fields In the telecommunication industries optical fibers have been adopted broadly to replace metallic conductors However none of the optical fibers can survive abrasion or corrosion without the application of a coating material For microelectronics protection in terms of coatings and encapsulants is deemed necessary to prevent corrosion One of the major causes of corrosion has been shown to be water which appears to be abundant in our earthly environments Water can attack the bulk adhesive or sealant the interface or the adherend Water can also cause delamination of coating film and it is definitely the major ingredient in causing cathodic or anodic corrosion Thus water becomes the major obstacle in solving durability problems of various materials in harsh environments *Handbook of Wafer Bonding* Peter Ramm, James Jian-Qiang Lu, Maaiké M.
