Introduction to Surface Chemistry and Catalysis Gabor A. Somorjai, Yimin Li, 2010-06-08 Now updated the current state of development of modern surface science Since the publication of the first edition of this book molecular surface chemistry and catalysis science have developed rapidly and expanded into fields where atomic scale and molecular information were previously not available This revised edition of Introduction to Surface Chemistry and Catalysis reflects this increase of information in virtually every chapter It emphasizes the modern concepts of surface chemistry and catalysis uncovered by breakthroughs in molecular level studies of surfaces over the past three decades while serving as a reference source for data and concepts related to properties of surfaces and interfaces The book opens with a brief history of the evolution of surface chemistry and reviews the nature of various surfaces and interfaces encountered in everyday life New research in two crucial areas nanomaterials and polymer and biopolymer interfaces is emphasized while important applications in tribology and catalysis producing chemicals and fuels with high turnover and selectivity are addressed The basic concepts surrounding various properties of surfaces such as structure thermodynamics dynamics electrical properties and surface chemical bonds are presented The techniques of atomic and molecular scale studies of surfaces are listed with references to up to date review papers For advanced readers this book covers recent developments in in situ surface analysis such as high pressure scanning tunneling microscopy ambient pressure X ray photoelectron spectroscopy and sum frequency generation vibrational spectroscopy SFG Tables listing surface structures and data summarizing the kinetics of catalytic reactions over metal surfaces are also included New to this edition A discussion of new physical and chemical properties of nanoparticles Ways to utilize new surface science techniques to study properties of polymers reaction intermediates and mobility of atoms and molecules at surfaces Molecular level studies on the origin of the selectivity for several catalytic reactions A microscopic understanding of mechanical properties of surfaces Updated tables of experimental data A new chapter on soft surfaces polymers and biointerfaces Introduction to Surface Chemistry and Catalysis serves as a textbook for undergraduate and graduate students taking advanced courses in physics chemistry engineering and materials science as well as researchers in surface science catalysis science and their applications Catalysis by Acids and Bases B. Imelik, C. Naccache, G.

Coudurrier,Y. Ben Taarit,J.C. Vedrine,1985-02-01 Because of the great importance of acid catalysis in the petrochemical industry extensive research has been carried out during the last 30 years concerning the fundamental and applied aspects of catalysis by acids In contrast base catalyzed reactions have received little attention in heterogeneous catalysis The aim of this symposium was to evaluate our knowledge of the important area of acid and base catalysis and to cover a broad range of solids zeolite chemistry being only one aspect of heterogeneous catalysis

Characterization of Porous Solids VI

,2002-11-14 This book contains 99 of the papers that were presented at the 6th in the series of Symposia on Characterization of Porous Solids held in Alicante Spain May 2002 Written by leading international specialists in the subject the contributions represent an up to date and authoritative account of recent developments around the world in the major methods used to characterize porous solids The book is a useful work of reference for anyone interested in characterizing porous solids such as MCM 41 mesoporous materials pillared clays etc Papers on pore structure determination using gas adsorption feature strongly together with papers on small angle scattering methods mercury porosimetry microcalorimetry scanning probe microscopies and image analysis

Heterogeneous Catalysis and Fine Chemicals III J. Barbier,J. Barrault,C. Bouchoule,D.

Duprez,C. Montassier,M. Guisnet,G. Pérot,1993-09-09 Heterogeneous catalysis plays a major role in the organic synthesis of specialty and fine chemicals However as the interaction between surface sites and functional groups is complex more investigations are necessary into the effects of catalysts on the reaction mechanisms The Third International Symposium on Heterogeneous Catalysis and Fine Chemicals provided an opportunity for discussions on the basic and practical aspects of this subject between researchers manufacturers and users of solid catalysts for synthesis of fine chemicals The present volume comprises the invited plenary lectures and research papers classified under the three main headings hydrogenation oxidation and acid catalysis All papers were refereed A large variety of reactions are described the emphasis being on selectivity taking into account all aspects chemo regio and stereoselectivity including enantioselectivity and on the change of these selectivities as a function of the characteristics of the catalysts and operating conditions

Successful Design of

Catalysts T. Inui,1988-12-01 In July 1988 a Worldwide Catalysis Seminar was held to mark the 30th anniversary of the Catalysis Society of Japan After the 9th International Congress on Catalysis in Calgary about 25 Japanese researchers working on catalysis visited and held seminars in four countries Each seminar focused on a specific subject yet also covered a wide range of topics in catalysis from the fundamental to the industrial stages This volume containing the proceedings of this unique event reflects the successful way in which the seminars provided an opportunity for direct communication and discussion of how best to achieve the successful design of catalysts

Future Opportunities in Catalytic and Separation

Technology M. Misono,Y. Moro-oka,S. Kimura,1990-01-22 The production of useful materials and the removal of polluting substances are fundamental to chemical technology and in this respect catalytic and separation processes play essential roles In order to cope with increasing demands to find solutions for the shortage of natural resources and global environmental

pollution rapid and significant progress in the technology is required This book results from the successful seminar on Selective Reactions and Separation held at Oiso Japan in February 1988 The seminar was organised by ASPRONC the Association for the Progress of New Chemistry as the fourth in a series of seminars on Frontier Technology ASPRONC was inaugurated in 1986 and its membership comprises major companies in the chemical industry and various other sectors interested in chemistry The aim of this seminar was to explore the frontiers of catalytic and separation technology and to discuss the requirements for its future development The many interesting lectures and active discussions which resulted stimulated the editors to prepare this book Each lecturer has written a chapter which represents a significantly revised and extended version of his original lecture The book will appeal to many readers and will undoubtedly help to make a positive contribution to the future development of chemical technology

Structure and Reactivity of Surfaces C. Morterra,A. Zecchina,G. Costa,1989-07-01 Between the area known as surface science which mainly deals with single crystal surfaces and the vast area of the surface properties of dispersed solids knowledge of which is widely applied in catalysis and materials science there is still a remarkably wide although gradually decreasing gap Because fundamental physico chemical problems are involved this borderline area needs to be explored With this objective the Trieste meeting brought together specialists with a variety of origins and backgrounds with the aim of stimulating the growth of our knowledge in this area This proceedings volume contains ninety three papers comprising plenary lectures short communications and poster contributions on the applications of physical and theoretical methods to perfect and dispersed microcrystalline and amorphous metals oxides and mixed systems Special emphasis is given to metal support interfaces The book thus provides a wealth of up to date information on a topic of current interest which will be of value to researchers who use chemical and or physical methods for the study of surfaces

Preparation of Catalysts IV G. Poncelet,B. Delmon,P. Grange,P.A. Jacobs,1987-05-01 The proceedings of the IVth International Symposium on the Scientific Bases for the Preparation of Heterogeneous Catalysts are presented in this volume Since its start in 1975 this series of Symposia has continued to attract increasing scientific attention An appreciable proportion of the papers presented at this Fourth Symposium stemmed from industrial research laboratories The symposium dealt with catalysts for selective oxidation hydrodesulphurization Fischer Tropsch catalysis methanol synthesis metal supported catalysts and new trends in catalyst preparation

Applications in Industry ,1998-12-17 Volume I contains a brief review of adsorption history and its development for practical purposes up until now It also presents some important information on adsorbents and catalysts as well as on the methods of their characterization The part of this volume dealing with practical industrial applications includes chapters presenting advanced technical tools for high capacity adsorption separation of liquid and gas mixtures development of new adsorbents for removal of hazardous contaminants from combustion flue gases and wastewaters degasification of coal seams and fabrication of inorganic membranes and their applications A comprehensive review is also included on contemporary utility of self assembled

monolayers adsorption proteins and their role in modern industry adsorption methods in technology of optical fibre glasses sol gel technology solid desiccant dehumidification systems etc The articles give both the scientific backgrounds of the phenomena discussed and emphasize their practical aspects The chapters give not only brief current knowledge about the studied problems but are also a source of topical literature on the subject A comprehensive bibliography on adsorption principles design data and adsorbent materials for industrial applications for the period 1967 1997 concludes the book
