Advocacy Opposition

Joel D. Aberbach

Advocacy Opposition:

FCC Record United States. Federal Communications Commission, 2006 **Keeping a Watchful Eye** Joel D. Aberbach, 2001-06-29 Congressional oversight activity has increased dramatically since the early 1970s Congressional committees now spend more of their time holding hearings to review the activities of federal agencies and committee staff members are busy collecting information about what goes on during program implementation This book examines the reasons behind the surprising growth of congressional oversight Using original data collected for this project Joel D Aberbach documents the increase in oversight activity and links it to changes in the political environment He explores the political purposes served by oversight the techniques Congress uses to uncover information about the activities of the federal bureaucracy and the reasons why topics get on the oversight agenda He concludes that even though the U S government system was not designed with a large administrative sector in mind its ability to expose bureaucratic behavior to public scrutiny is impressive and the Congress plays a vital role in this endeavor **Of Fears and Foes** Jose V. Ciprut, 2001-09-30 At the end of the deadliest century known to mankind the world still finds itself mired in bloodshed In addition to formal interstate conflict we see an increase in other forms of organized violence including ethnic warfare terrorism civil conflict and internationally necessitated police actions Cornered by these powerful global forces nation states continue their quest for security Theirs is a search plagued by futility since the very meaning of the word security is being eroded by the pace and tenor of change in an evolving international environment more complex and confusing than ever The explanatory power of traditional notions of international security which has provided a cornerstone for international relations theory as a whole seems increasingly inadequate in helping to understand the makings of global security A novel approach is needed one that integrates discerning insights from the study of language history geography religion economics and technology with more traditional understandings of the workings of power on an international level and on an intranational scale Of Fears and Foes presents just this kind of innovative thinking by some of the most creative scholars working on these issues today Ciprut invites us to consider a fundamental reassessment of what constitutes security and insecurity in an emerging global environment **Advocacy and Opposition** Karyn Charles Rybacki, Donald Jay Rybacki, 1986 *Campaign Finance Reform Proposals of 1996* United States. Congress. Senate. Committee on Rules and Administration, 1996 **The Atom and the Fault** Richard L. Meehan, 1984 With wit and thoughtful compassion Richard Meehan presents one of the most perplexing of contemporary moral predicaments one that arises in every attempt to assess potentially hazardous technologies He focuses on the longrunning controversy over suspected earthquake faults near the nation s first corporately owned nuclear test reactor at Vallecitos California and uses this account of the politics of expertise to probe the nature of scientific truth and its relationship to the determination of public safety At Vallecitos Meehan points out the opinions of the experts were radically divided Where one group saw clear and ominous evidence of an earthquake fault in trenches dug at this showpiece site

others saw only the mark of an ancient landslide How did these experts arrive at their opinions Were they simply representing corporate as opposed to environmentalist points of view And how are the public regulatory agencies charged with deciding such issues supposed to balance these seemingly irreconcilable opinions The Atom and the Fault explores these crucial questions as the issue of the earthquake safety of nuclear power plants continues to grow into a struggle encompassing government regulatory bodies public utilities private industry engineers geologists and citizen activists It paints candid portraits of the principal expert players clarifies the difficult and often delicate interplay of honesty and loyalties among them and lucidly explains the technical issues and viewpoints involved As a professional participant in several environmental controversies in which so called scientific facts were represented by opposing points of view Meehan is uniquely qualified to tell this tale He is a consultant to industry government agencies and law firms specializing in forecasting and damage assessment related to earthquakes and land failures and an adjunct professor in the Values Technology Science and Society program at Stanford University His first book Getting Sued and Other Tales of the Engineering Life was published by The MIT Press in 1981
