Aerobiological Engineering Handbook Wladyslaw Jan Kowalski, 2006 Solve any building air quality problem A complete reference for the design of air filtration systems and HVAC systems used in homes schools hospitals laboratories or animal facilities this book offers complete descriptions of each of the major technologies currently used for air disinfection Each subject chemical or microbial is treated in sufficient detail to allow the design of these components to solve specific building air quality problems Design solutions for control of gases and odors Recommended technologies and methods to combat biological terrorist weapons in HVAC systems Diagnosis of air quality problems Complete airborne pathogen database for the identification of infection risk *Ultraviolet Germicidal Irradiation Handbook* Wladyslaw

Kowalski, 2010-01-12 This reference covers technical information on ultraviolet germicidal irradiation and its application to air and surface disinfection and the control of pathogens and allergens Its main focus is airborne microbes and surface contamination applications **Hospital Airborne Infection Control** Wladyslaw Kowalski, 2016-04-19 Although nosocomial or hospital acquired infections have been well cataloged and are fairly well understood traditional solutions have failed to completely eliminate the problem Even the most modern hospitals find themselves stymied by the persistence of these pathogens in hospital wards and operating rooms The degree to which most of these infections are airborne is not known but a growing body of evidence indicates that airborne transmission plays a role in many hospital acquired infections Addressing one of the most important topics in health care Hospital Airborne Infection Control is the first book to deal with the control of airborne nosocomial infections in detail It identifies all pathogens known or suspected to be airborne along with their sources in hospital environments It also summarizes all epidemiological evidence for airborne transmission The text addresses respiratory surgical site burn wound immunocompromised pediatric nursing home and non respiratory infections In each category an extensive number of examples show that inhalation is not the only airborne route by which infections may be transmitted Noting that airborne transmission and surface contamination are virtually inseparable the author emphasizes that both air and surface disinfection including hand hygiene are important factors in controlling the transmission of airborne disease He also proposes a variety of new solutions and technologies including ultraviolet ionization ozone plasma and vegetative air cleaning systems A compendium of scientific and medical information this book helps hospitals control nosocomial infections and outbreaks spread by the airborne route as well as by direct contact and contact with fomites or contaminated equipment **Fundamentals of Bioaerosols Science** Naomichi Yamamoto, 2023-05-24 Fundamentals of
